Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average per cent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
V. Berlinguette – Assistant Chief Statistician, Business Statistics Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Employer Labour Costs in Canada

K.J. Harwood*

In most industrialized countries there is an increasing awareness by employers, employees, labour unions and governments at all levels, of the growing importance in total employee compensation of certain items which have come to be known as "Fringe Benefits". In a general way the so called "Fringe Benefits" comprise a wide variety of direct and indirect costs for non-wage items incurred by employers on behalf of their employees.

As an indication of the growing importance of "Fringe Benefits", the United States Bureau of Labor Statistics studies of employee compensation show that for production workers in manufacturing, compensation other than straight-time pay for time worked increased from 18.5 per cent of total compensation in 1959 to 23.8 per cent in 1970.

In collective bargaining more emphasis is being placed on "Fringe Benefits". For example, the number of non-office (production) employees in Canada entitled to ten paid holidays per year increased from 14 per cent in 1967 to 37 per cent in 1974. Analyses of collective agreements also indicate that more employees are becoming eligible for longer vacations after shorter periods of service.

This subject area is also important in improving estimates of labour income, which for Canada in 1975 represented some 73 per cent of net national income and 57 per cent of Gross National Product. In addition, information on this subject is required in the development of better productivity measures, of unit labour costs, and for the development of labour policy by government, both central and local.

Although the concept of "Fringe Benefits" is generally understood, there is no uniform interpretation; however, the notion of "Labour Costs" seems more appropriate. "Labour Costs" comprise not only direct and indirect employee compensation, but also other costs incurred by employers pertaining to the employment of labour. These costs include food, vocational training, transportation, work clothes, recruitment etc. Surveys of labour costs are designed to measure these costs; the results can be used to measure the actual costs incurred by an employer in meeting the terms of a collective agreement.

At the present time the labour cost surveys conducted by the Labour Division of Statistics Canada are limited to those employer expenditures which comprise employee compensation: wages and salaries, additional cash payments such as severance pay, and the costs to employers of compulsory and voluntary welfare and benefit plans. Those costs which are primarily of an operational nature or for which accurate measurements cannot be determined, are excluded; the most significant are mentioned later.

Canadian Survey Activitiy to Date

Although interest in statistics of "Fringe Benefit" costs has existed in Canada for some time, it was not until 1968 that the first official national survey of labour costs was conducted. The United States Bureau of Labor Statistics initiated its first survey of Expenditures for Selected Compensation practices in 1958 and has conducted surveys in this area on a regular basis since that time. Most European countries have also conducted similar studies for a number of years.

Since 1968 and up to the present time, labour cost surveys conducted by the Labour Division of Statistics Canada have covered firms employing 20 or more persons in selected industry divisions or major groups. This employment size cut-off was adopted so that the data would correspond to those produced in the monthly employment and payrolls survey and the Annual Survey of Working Conditions conducted by Canada Department of Labour. In view of the complexity of the survey, it was decided to limit coverage to specific industries starting with manufacturing. Most industry divisions have now been surveyed and data have been produced for the major groups within the industry divisions. The tables presented at the end of this article summarize the results of these surveys.

---

*K.J. Harwood is the Labour Costs Project Manager in the Labour Division. This paper was presented at the North American Conference on Labor Statistics held in Ottawa, July 26-29, 1976.

A major defect in the present program is that sufficient data are not yet available to measure changes. Only when surveys of specific industries have been repeated is it possible to make comparisons over a period of time. For example, changes can be measured over single three year periods for Manufacturing (1968 and 1971), and Mines, Quarries and Oil Wells (1969 and 1972). Much useful information has been learned about the characteristics of each industry surveyed so that it has become possible to proceed with regular labour cost surveys which will cover all major industry divisions at the same time. The first such survey will be conducted by the Labour Division in February 1977, with reference to the Calendar Year 1976.

Review of Coverage and Content of the 1976 Labour Costs Survey:

Survey Content

The Labour Costs Survey seeks to obtain information on selected components of "Total Employee Compensation" as follows:

(a) Direct payments to Employees comprising: the amounts reported as income required for taxation purposes. This category is subdivided under three headings:

  (i) Pay for time worked: Regular work and overtime, shift work, production bonuses etc.;

  (ii) paid absence: Vacation, paid holidays, sick leave etc.;

  (iii) miscellaneous direct payments: Non-production bonuses, severence pay and taxable benefits.

(b) Employer contributions and/or payments to employee welfare and benefit plans comprising:
Legally required payments such as Workmen's Compensation and Unemployment Insurance and plans under collective or other agreement with employees; Pension Plans, Group Life and Health Plans.

It is recognized that for a number of items raw data can not be provided by all respondents. For those items where the actual expenditure is not available, other directly related information is requested; a reliable estimate of the actual expenditure can then be produced. For example, the expenditure for paid holidays can be estimated from the number of holidays observed.

Rest periods, coffee breaks, travel time, wash up time, call-in, call-back and time off in lieu of overtime premium pay are not identified as separate cost items. Although these items represent a significant cost, they cannot be measured or estimated accurately. As a result, "Pay for time worked" includes a small percentage of unproductive time. In the case of "call-in" and "call-back" the employee is assumed to have worked for the entire period represented by the minimum pay received.

Since a number of expenditures involve a time element, hours data are sought where it is practical. Specific labour costs may be produced in terms of an hourly rate and information on the time elements of specific labour cost items for productivity studies can be produced.

Exclusions

Labour costs which are considered to be operational costs rather than employee compensation are excluded from the Labour Costs Survey. The more significant exclusions are:

(a) Payments made for the services performed by persons who are not employees: own accounts or individuals who are employees of other firms. (Compensation data for the latter are reported by their own employers).

(b) Costs of recruiting and training.

(c) Costs of services such as parking, cafeteria operations, recreational facilities and in-plant medical care.

It is acknowledged that employees may benefit quite substantially as the result of some of those expenditures. However these costs must be considered in conjunction with other costs such as lower taxes based on the location of the establishment, and loss of productive time as the result of providing in-plant medical services.

(d) Payments in kind that are not taxable benefits such as discounts on employee purchases and transportation passes.

Some payments in kind are considered to be income in the employee's hands by the Department of National Revenue (Taxation). As a result, the value of such benefits should be reported by the employer as Taxable Benefits even if the amounts reported do not represent the actual costs to the employer of the benefits conveyed. The Labour Costs Survey excludes all other payments in kind because there is no simple method of determining the true cost of these benefits.

Coverage

The all-industry survey will be a sample survey covering all components of the economy with 20 or more employees except agriculture, fishing and trapping; it will also include Non-Commercial Service and Government Administration at the Federal, Provincial and local levels. The sample is expected to contain some 8,000 reporting units.

In previous surveys, coverage embraced all firms in the industry or industry group covered with 20 or more employees. However, samples were used for the 1967 and 1968 Surveys of Manufacturing and the 1972 Survey of Trade.

Data will be collected by major group at the provincial level. National totals will be produced for 46 major groups, 9 industry divisions and for all industries as a whole. Estimates for all industries as a whole will be produced for each of the ten provinces and the northern territories and estimates for a number of major groups will be produced for the principal economic regions. The sample was not designed to produce reliable estimates for industries at the three digit level due to resource limitations, and the need to minimize response burden.

The Standard Industrial Classification Codes of 1970 will be used for the 1976 and subsequent Labour Cost Surveys. It should be noted, though, that except for the 1975 Survey of Services to Business Management, the 1960 SIC codes were used for previous surveys of specific industries. As a result there may be cases where data are not strictly comparable over time in terms of their industry coverage.

In the All-industry Labour Cost Survey separate data will be collected for salaried (office) employees and for wage earners (non office employees). These categories correspond to the U.S. non-production and production employees respectively. Separate data will be obtained for part-time and casual employees in those industries where the incidence of such employees is significant such as in retail trade and most of the service industry. In the absence of these distinctions, meaningful inter-industry comparisons would not be possible.

Reference Period and Frequency

The reference period for this survey is the calendar year. However, respondents may report for their closest fiscal year, if this is more convenient. It is expected that less than 6 per cent of the respondents will choose their fiscal year.

Initially, the All-industry Labour Cost Survey will be conducted biennially. Even though the cost of conducting the survey must also be considered, the results of the initial surveys will determine whether this frequency is adequate.

Schedule for the First All-Industry Survey

Questionnaires were mailed at the end of January 1977. Respondents selected in the sample received an advance notice in October 1976. The Labour Division intends to produce a preliminary report in July 1977 and a complete publication in the fall.

Factors Affecting Labour Costs in Canada

Questions have been raised concerning the effect collective bargaining has on "Fringe Benefits". The results of other surveys show that individuals employed in establishments in which most workers were covered by collective agreements received more in "Fringe Benefits" than those employed in establishments where there are no collective agreements. The Labour Cost Surveys which have been conducted prior to 1973 did not provide the means to verify this fact but because of the interest in this question, the means to test it were incorporated in the survey.

Nevertheless, there is still not enough data to quantify the impact of collective agreements on labour costs. Other factors such as location and industry seem to play major rôles in establishing wage rates and other employee benefits.

The Labour Cost Survey must take into account the direct involvement of government at the Federal and Provincial levels in providing certain employee benefits in their overall welfare programs. As a result of the introduction of these programs, existing private plans providing similar benefits have been modified or withdrawn. Furthermore, differences in the costing methods in each province must also be considered in the determination of survey content. For example, the Provincial and Territorial governments administer their own medicare schemes under the Federal Plan. Some of these plans are supported by premiums or payroll taxes; others are supported entirely by general taxation, and some by a combination of premium and general taxation. There are no identifiable employer costs when costs are met through general taxation.

The action of government has also influenced employer labour costs in other areas, such as pension plans. For industries under Federal jurisdiction and for other industries operating in certain provinces, legislation requires pension funds to be fully funded and to provide for full vesting after a specified time. These requirements have resulted in actuarial deficits, requiring additional payments by employers. A further factor in the pension plan area involves the Canada and Quebec Pension Plans. About one-third of the private pension plans are "integrated" with the CPP/QPP. It should be noted that while one plan in three is integrated, nearly three-quarters of all members are in these plans. Each time the earnings base for the CPP/QPP rises, there is an increase in

(continued on page 143)

Observations

Supplementary Survey

In January of 1977 the Labour Force Survey Division of Statistics Canada sponsored a Supplementary Survey for the purpose of gathering information on the annual labour force participation patterns of Canadians. These data are designed to complement the 12 monthly observations taken by the Labour Force Survey in 1976.

The survey's content covered such topics as:

(1) The length and timing of periods of employment, unemployment, and absence from the labour force in 1976.
(2) The length and timing of periods of full-time school attendance.
(3) The reasons for engaging or not engaging in certain labour force activities. For example, the reason for working only part of a month, the reason for working part-time, the reason for not seeking work in particular months, etc.

As presently planned, this supplementary survey will be the first of such surveys with succeeding observations being taken in January of each year. The result will be a consistent time series of data allowing for comprehensive year-over-year comparisons.

Preliminary tabulations and analysis will be available by mid 1977. For further information contact Richard Veevers, Labour Force Survey Division, Statistics Canada at (613) 996-4150.

Can culture be measured?*

In 1975, Canadians purchased 10,000,000 theatre tickets, watched an average of 20 hours of television per week, read thousands of books and hundreds of newspapers, and did some writing too. In short, one way or another, they participated in the cultural life of the community to which they belonged. But more than that, despite any concern caused by inflation, unemployment or violence, Canadians are showing an increasingly noticeable interest in the whole group of activities known as culture, believing that it would continue to enrich the quality of their lives. Governments, on their part, feel that they have a responsibility in this matter. They subscribed, and still do subscribe, to the conclusions of the Venice Conference[1], which stated that it was the duty of governments to ensure the cultural development of their community and provide each of its members with the means to participate.

This is certainly not an easy task, as governments are well aware. They often feel torn between their concern for respecting creative freedom and their desire to provide effective assistance. At the very least, their aim is to develop a climate that favours cultural growth and active participation by all Canadians across the land. However, in several instances it is clearly their wish to go beyond that and support valid efforts made in all areas of culture.

Whatever their attitude toward the measures that should be taken, governments on all levels are convinced that, before they can make a valid contribution to the development of Canadian culture, they must understand what it is now. They want to observe it from various angles, classifly it and even, if such a thing is possible, measure it. By doing all this, they believe they will be able to act with greater confidence; furthermore, with the passage of time, they will be able to evaluate the results of their actions, and, if necessary, change their approach.

Aware of this need, the Secretary of State Department and Statistics Canada undertook to develop a program of cultural statistics. Some years ago they introduced a number of surveys with a view to eventually incorporating them into an overall plan. Such a plan has now been completed.

It will be composed of fourteen projects designed to examine the main aspects of cultural life in Canada. However, before any further details are given about this statistical program, it might be a good idea to define what we mean by the word culture in this context.

---

*This note was prepared by Yvon Ferland, Assistant Director, Cultural Sub-division, Education, Science and Culture Division.

[1] Intergovernmental conference on the institutional, administrative and financial aspects of cultural policy, organized by Unesco and held in Venice from August 24 to September 2, 1970.

Like any other complex idea, the concept of culture cannot be defined in a few short lines. Although we recently counted over 200 definitions of culture, no single one seems able to meet with general acceptance by the interested parties.

Faced with this dilemma, the committee that developed the program decided simply to describe what it intended to include under the heading of culture.

In doing this, it noted that the idea of expression was included in most of the definitions. One stated, for example, that culture was "anything that enables a person. . . to find himself, to assert himself and to understand the world".[2] Or again, culture is that "which would give greater play to the principle of pleasure that guides the individual *towards various forms of expression* of emotional impulses".[3]

On the basis of this idea of "forms of expression", an attempt was made to identify a number of sectors in which these forms are represented and, in addition, to specify, for each sector, the aspects under which the forms could be observed. The result of this procedure is shown in Table 1 (p. 150).

Column 1 lists the sectors, and the other columns show the various aspects: creation and production, presentation and distribution, conservation and utilization. In this manner, the book sector, for example, can be studied from the point of view of the authors and editors, or that of the bookstores, libraries or even readers.

Table 1 accordingly attempts to define what is contained in this vast field known as culture – the field we are trying to observe in detail through our program of cultural statistics. For want of a definition of culture, the program attempts to describe the object of our data collection activities and statistical analyses. The table also shows that some projects concentrate on a fairly limited area of culture, as in the case of the survey of museums or publishing; in contrast, others, such as the study of the Canadian cultural experience or that of public expenditures on culture are concerned more with the overall picture.

Let us now return to the fourteen projects mentioned earlier. Again, these are presented in tabular form (Table 2, p. 151). The title of each project is indicated in column 1. Next an extremely brief description is given followed by information on both the frequency of corresponding surveys or studies and the methodology that will be used.[4]

The reader may wonder how well the fourteen projects cover what was described in Table 1 as constituting overall culture. This question is answered in Table 3, which refers back to Table 1 but, for each subject listed, indicates which project will study it. For instance the subject "Author" will be treated in project 11, "Creators". For some subjects we will use statistics already collected for other projects by Statistics Canada. In such cases, the project title is given in italics in Table 3. For instance, the survey of *Family Expenditure* will provide information about the money spent on book purchases.

At the start of this article, we queried whether culture could be measured. The Secretary of State Department and Statistics Canada apparently feel it can. However, we are as aware as the next person that culture involves a qualitative aspect that cannot easily be reduced to statistics. While the number of theatrical productions staged in a city can be counted, it is more difficult to use statistics to assess the artistic and cultural value of each performance. Measurements such as those expressing the attendance at a play or even the attitude of a sampling of the population, can help up to a certain point to give an idea of the public's appreciation of a particular form of culture, but they do not tell the whole story. Once again, we are aware of this point and merely claim to present statistics, not critical opinion and observations.

We do believe though, that the statistics we have already begun collecting and expect to analyse will enable government officials to assess the status and development of culture in Canada more effectively. An analysis of these data will enable them to judge the public reaction to the various forms of expression or, if you prefer, of culture. It should even make it easier for Canadians to evaluate the status of their culture, the problems inherent in it and the effort made to ensure its preservation and development. Finally, cultural statistics should provide valid answers to the questions raised by certain aspects of a national identity. Hence, they should be useful to sociologists and other researchers interested in such questions.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancls or fiancles and other unspecified persons not intending to enter the labour force.

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. Figures for the quarters beginning 1975 represent registrations filed at the provincial Vital Statistics Offices during the period under review and could differ from the final figures. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

28 1.1 National Income and Gross National Product
28 1.2 Gross National Expenditure, Current Dollars
29 1.3 Gross National Expenditure, Constant Dollars
29 1.4 Sources of Personal Income
30 1.5 Disposition of Personal Income
30 1.6 Sources and Disposition of Gross Savings
31 1.7 Government Revenue, Expenditure, and Surplus of Deficit, by Level of Government
35 1.8 Implicit Price Indexes
35 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

36 2.1 Real Domestic Product by Industry of Origin, Quarterly
37 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

42 3.1 Canadian Balance of International Payments, Current Account, All Countries
42 3.2 Canadian Balance of International Payments, Current Account, Country Distribution
43 3.3 Canadian Balance of International Payments, Capital Account, All Countries

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

[1] Includes the taxes on life insurance companies introduced in 1969 At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

For source see Table 1.9.

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at the end of the month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U.I. benefit, prior to July 1975 included with regular benefit

[1] Vacancies for full-time, casual, part-time, seasonal and temporary jobs which were immediately available. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage Adjustments are made for establishments on shift work, etc [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers, however, the total includes all work stoppages The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually [5] Includes miscellaneous manufacturing industries [6] Includes publishing and allied industries [7] Includes storage and communication industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

Section 6 · Manufacturing

78 1. Total Inventories, Shipments, Orders
79 2. Manufacturing Shipments, Selected Industries
81 3. Manufacturing Inventories, Selected Industries
83 4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification
84 5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification
85 6. Manufacturing Goods in Process and Finished Products by Economic Use Classification
86 7. Tobacco and Beverages
86 8. Rubber
87 9. Rubber Products
87 10. Raw Hides, Skins, Finished Leather
88 11. Footwear Production
88 12. Primary Textiles
89 13. Production of Sawn Lumber
89 14. Pulpwood, Wood Pulp and Newsprint
90 15. Primary Iron and Steel
91 16. New Motor Vehicles
92 17. Refrigerators, Freezers, Washing Machines and Clothes Dryers
92 18. Radio and Television Sets

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

				Inventory at end of month						
						All inventory held				
Annual average and month	Shipments[1]	New orders received during month[2]	Unfilled orders at end of month	Owned[3]	Held but not owned	Total	Raw materials	Goods in process	Finished products	Ratio of inventories owned to shipments

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export [7] End of period

[1] 100 cu. ft. of solid wood, pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Production plus imports less re-exports, minus exports [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1] In 1975, approximately 1,600 municipalities are being surveyed. [2] This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity

---

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland, includes hatching eggs

Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Frozen Poultry Products (32-009), Production of Eggs (23-003), Statistics Canada.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales

---

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

---

[1] Column numbers refer to tables 3 and 4, section 11 [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months [3] Includes special transaction-trade, not shown separately [4] Includes scrap [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were Paper and board (44) now excludes woodpulp Drilling, excavating and mining (68) now include oil and gas field machinery Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Section 12 · Transportation

130 1. Carloadings of Revenue Freight
131 2. Railway Operating Statistics
131 3. Operating Statistics of Canadian Air Carriers
132 4. Operating Statistics of Canadian Pipelines
132 5. Shipping Traffic

Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

Year and month	Total railway revenue freight loadings (carload and non-carload) ('000 tons)		Total revenue cars loaded (carload only)	Farm products and food						Mine products			
	unadj	S.A.		Wheat	Other grain and grain products	Fresh fruits and vegetables	Other agriculture products	Animals and their products	Prepared food products	Iron ore and concentrates	Other metal ores and concentrates	Potash	Coal, sand, cement and other mine products

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

(continued from page 8)

contributions to those plans resulting in a corresponding decrease to private plans.

Other legislative factors affecting employer labour costs arise from the various Labour Standards Codes providing for a minimum number of paid holidays and minimum vacations.

The involvement of governments, particularly in benefit plans, limits the validity of comparisons of employee compensation statistics in different countries. For example, the Canada Pension Plan and U.S. Social Security cannot be treated as equivalent cost items.

The record-keeping practices of employers to some extent affect the quality of data produced. As already noted, many employers do not keep accurate records of unproductive time such as rest periods and, as a result, pay for time worked includes these costs. Estimates are usually provided for the paid absences of salaried employees. In the area of benefit plans, most large firms have centralized the administration of these plans, thereby making it difficult to obtain actual costs at the local level; in such cases costs are pro-rated.

Conclusion

The new labour costs project will enable Statistics Canada to provide on a regular basis:

(a) Comprehensive information on the composition of the total wage package (total employee compensation) by industry, area, and employment category. These data will serve as the basis for establishing employee compensation indexes.

(b) Up to date data which will be more suited to the needs of those involved in collective bargaining.

(c) Improved estimates of Labour Income through more comprehensive and up to date data on supplementary labour income.

(d) Means for the development of better productivity measures and unit labour costs.

In the years ahead, there will be new and interesting forms of compensation for employees. Although "take home pay" will always remain a major factor in the total pay package, other forms of compensation are being introduced thus making the analysis of total compensation a subject of growing interest and importance.

Definitions

An employee is any person who, in the survey reference period, works for an employer and receives compensation for his work and/or absence in the form of a wage, salary, commission, stipend or a combination of these types of payments.

Standard work week is the number of hours and days of work normally scheduled for the majority of full-time employees reported.

Time-worked is the total time an employee spends at work and includes rest periods, time off in lieu of overtime premium pay, stand-by, call-in time, etc. In some cases, time worked was calculated by using the standard work week.

Note: Pay for time worked includes pay for work done by employees for whom the basis of remuneration does not involve a time element.

Basic pay (pay at regular rates) comprises pay at regular, straight-time or piece rates, etc., including incentive and cost of living bonuses and commissions.

Premium pay comprises payments made by employers in excess of basis straight-time pay for overtime, holiday work, shift work and other additional pay covering items such as week-end work on rotation shifts, dangerous work, dirty work, etc.

Employer Contributions to Employee Welfare and Benefit Plans

(a) **Payments required by law** comprise employer expenditures for Workmen's compensation, Unemployment insurance and the Canada and Quebec pension plans.

(b) **Benefit plans** comprise pension plans; life insurance and related plans such as travel insurance, accidental death and dismemberment benefits, etc.; health insurance and related plans such as hospital, medical, surgical, major catastrophe, weekly indemnity, etc. including certain payments made to provincial medicare plans that are not "Taxable Benefits" for income tax purposes; other plans such as supplementary unemployment benefits, severance or technological layoff funds, savings and thrift plans, etc.

Note: Payments made directly to employees for similar benefits are included under miscellaneous direct payments.

Total compensation is the total of all employer expenditures for the selected items in the survey. VIZ — Gross payroll plus employer contributions to employee welfare and benefit plans.

TABLE 1. Estimated Labour Costs in Dollars per Annum, Canada, 1968-1975

	Manufacturing		Mines, Quarries and Oil Wells		Finance, Insurance and Real Estate 1970

TABLE 2. Description of Projects

TITLE OF PROJECT	BRIEF DESCRIPTION	FREQUENCY	METHODOLOGY
1. Book Publishing	type, content, purpose, sale, etc., of books, activities, type of control, financial situations, etc., of publishers	Every year	Direct survey with two separate questionnaires of the whole universe
2. Book Distribution	activities, financial situation, type of books, seasonal variation, clientele, etc.	Every year	Direct survey of exclusive agents and of other distributors
3. Newspapers and Periodicals	content, writers, other personnel, periodicity circulation, financial situation	Every two years at the most	Direct survey of the publishers' universe
4. Film	content, purpose, origin, type of produced or distributed films and companies' ownership and other financial, cultural and economic data	Every year	Addition to already existing surveys by Merchandising and Services Div. of Stats Can
5. Radio and Television	programmes according to content, purposes, origin and listeners according to socio-economic characteristics	To be determined	Analysis of CRTC, BBM and other sources' material
6 Performing Arts	performance, employment, income and expenditures and other descriptive and supplementary data	Every year	Survey of companies receiving Canada Council grants; universe to be expanded to other companies
7. Recording Industry	production of records by size of organization; type and content of records; sales by language, ownership, type, size and content category; export and mode of distribution	Every year	Survey of recording studios, record manufacturers and prerecorded sound tape manufacturers
8 Libraries	content, financial situation, activities, services, facilities, personnel, clientele of libraries	Every year for public, every second for academic or special libraries	Survey of the universe, at time through Provincial department
9. Museums	type, financial situation, clientele, personnel, collections, activities, facilities	Every second year	Survey of the whole universe
10 Other Facilities	type, financial situation, services, facilities, clientele, personnel of cultural or art centres,	One or two types a year	For each type, survey of the whole universe
11. Creators and Performers	background, socio-economic characteristics and acitivities of writers, artists, song writers, sculptors, etc	One type a year	For each type either survey of the universe or of a sample
12 Cultural Activities of Canadians	analysis of time spent on different cultural activities in depth studies of some of these activities including the type, the circumstances, the degree of satisfaction, etc.	Every three years for the general background Every year in between with one type or another	To be determined
13 Education and the Arts	background, socio-economic characteristics and activities of teachers and students involved in arts education Possible analysis of programme offered by Universities and Colleges	Every two years from 1979-1980	By putting together the relevant information already available at Statistics Canada
14 Cultural Expenses	expenditures by objects and functions of the federal, provincial and municipal governments about the subjects as described in Table 1	Every year	Analysis of public accounts with the collaboration of the Public Finance Division

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average per cent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
V. Berlinguette – Assistant Chief Statistician, Business Statistics Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 6, Table 8 – Rubber

With this issue the unit of measure has been converted from million pounds to metric tonnes.

Section 6, Table 12 – Primary Textiles

The table of primary textiles statistics has been deleted with this issue. The data from the Canadian Textile Institute will not be available for an indeterminate amount of time. The table will be reintroduced when these statistics become available. The remaining tables within the section have been renumbered accordingly.

Section 9, Table 8 – Fisheries Statistics

In this table the unit of measure for the "Landings of sea fish" series has been converted from million pounds to metric tonnes.

Public General and Allied Special Hospitals In Canada: Historical summary of inputs and utilization of facilities, 1953 to 1973

Louis A. Lefebvre *

Like other sectors of the Canadian economy, hospitals have grown considerably in the last two decades. The increased interest of both public and private bodies in health care has given rise to more and better health services. To some extent, the federal government's participation in financing health programs in Canada and the rapid rise in operating expenses are indications of the development that has taken place in the past fifteen years.

This study is a structured historical summary of the hospital sector over the last two decades. Numerical time series have been used to present trends in order to illustrate the development of some of the main components of the hospital sector over the last twenty years.

The universe of the study was defined as all operating public general and allied special hospitals in Canada[1]. Public mental hospitals and tuberculosis sanatoria were included in some cases to give a complete picture of the public hospital sector in Canada. In 1973, the total public hospital sector, including mental and tuberculosis institutions, accounted for 94% of the rated bed capacity in Canada, while public general and allied special hospitals accounted for only 69% of the rated bed capacity. No reference will be made to proprietary and federal hospitals since a complete set of statistical information is not collected from them.

The first part of the study looks at the hospital sector with respect to some general economic indicators. Within this framework, the hospital sector is compared in terms of its size relative to the health sector as a whole; its contribution to the Canadian economy is then determined in terms of the labour force and the GNP.

The second part of the study attempts to describe and quantify the "inputs" used by the hospital sector in its normal activities. The data will be classified under the following three main headings: physical resources; human resources; operating expense. The third part studies hospitals' utilization of the inputs presented in the second part.

Importance of the Hospital Sector in the Canadian Economy

The expenditures in the health field can be broken down into the following five sectors:

- personal health care
- institutional care
- professional services
- drugs and appliances
- other health expenditures

The institutional care sector is the largest in terms of the funds allocated to it, and has grown the most in relative and absolute terms since 1960. As shown in Table I, the institutional care sector accounted for 52% of the health expenditures in 1973, which have more than quadrupled since 1960.

Hospital care constitutes 89% of institutional care; in 1973, it represented 46% of the total health expenditures, and had an average annual growth rate of 10.5% between 1970 and 1973.

---

* Louis A. Lefebvre is an analyst on the staff of the Health Division. Unless indicated otherwise, the data presented in this paper originate from the Health Division, Statistics Canada, as of September 1975.

[1] For statistical purposes, Canadian hospitals are categorised according to the type of ownership: public, proprietary or federal; and type of service: general, allied special (extended care, rehabilitation, maternity, communicable diseases, children's, orthopedic, neurological, cancer, nursing stations, outpost hospitals, etc.) mental and tuberculosis. General hospitals are divided into teaching (full and partial teaching) and non-teaching (with and without long-term units) types, which are further subdivided into varying bed-size groups based on rated bed capacity. For further information see the Glossary, p. 150.

[1] Includes all public, proprietary and federal institutions.
[2] Includes voluntary organizations.
Source: Health and Welfare Canada, *National Health Expenditures in Canada 1960-1973*.

In a working paper published in 1974[2], the Minister of Health and Welfare Canada stated that health expenditures in Canada in 1971, including personal health care[3], represented 7.1% of the GNP.

Public general and allied special hospitals, including psychiatric hospitals and tuberculosis sanatoria accounted for 45% of this figure, or 3.18% of the GNP.

The operating expense of public general and allied special hospitals for the same year represented 38% of the total or 2.69% of the GNP. The operating expense of such hospitals has increased at an accelerated rate over the past twenty years with an average annual growth rate of 13.6%[4]. In addition, the operating expense of public general and allied special hospitals represent an increasingly large percentage of all public hospitals (85.4% in 1973). The growth rate is even more revealing when we compare it to the average annual growth rates of the GNP and the population, which are 6.7% and 1.9% respectively. In other words, the operating expense of public general and allied special hospitals increased at an average annual rate seven times that of the population and twice that of the GNP. This is illustrated in Chart 1, which shows the annual rate of change in the operating expense of hospitals, the GNP and the population from 1954 to 1973.

Observations

User Advisory Services

Statistics Canada, as Canada's central statistical agency, has a national responsibility for collecting and publishing the statistical information needed by governments, industry and the general public to understand the social and economic conditions of the country.

User Advisory Services is a division of Statistics Canada. Its primary task is to help people identify, obtain and effectively use statistical information.

User Advisory Services has offices in nine major cities across the country supported by a head office staff in Ottawa. Toll free telephone lines to the regional offices are available in several other cities.

Inquiries

The Regional Offices have libraries of Statistics Canada material and related information. They are staffed by knowledgeable inquiries officers who each year answer over 100,000 requests for statistics or advise on the meaning and use of data. Most inquiries are received by telephone, but many are by letter or from visitors to the libraries, which are open during normal working hours. Study areas are provided and limited photocopying is permitted. Arrangements to purchase publications can be made through the Regional Offices or directly from Statistics Canada in Ottawa.

The Regional Offices also have computer terminals which can access information directly from CANSIM, Statistics Canada's data base.

Regional Advisors

Each Regional Office of User Advisory Services has one or more Regional Advisors who are responsible for maintaining local liaison between Statistics Canada and users of statistics in federal, provincial and local governments, business, institutions and educational establishments. They promote the use of statistics through visits, talks and meetings; assist both experienced and inexperienced users with data problems and, if necessary, help people get in touch with the appropriate specialists in Ottawa.

Regional Advisors are also responsible for feeding back to Ottawa users' view, comments, criticisms, etc., to help Statistics Canada improve its products and services.

User Advisory Services in Ottawa consists of three sections:

Data Access and Use – provides the necessary coordination and support for the regional operations and produces literature to assist users, including the Statistics Canada Catalogue which is available free of charge on request.

Consultative Services – has a general responsibility for federal-provincial relations concerning statistics. It is the Secretariat for the Federal-Provincial Consultative Council on Statistical Policy and its Committees and other liaison activities with the public and private sectors. The section has a number of programmes designed to assist users, for example, compilation of an inventory of Statistics Canada's surveys and programmes, and production of material for data user training sessions.

Analysis and Development – undertakes market research to help Statistics Canada better understand and meet the needs of users and is responsible for channelling information on users' needs, views, etc., from the Regional Offices to the subject matter divisions in Ottawa. It also provides assistance to a Federal Government project to develop a clearing house of statistical information.

Re-design of the Employment Survey

The Labour Division is presently working on a four-year program to re-design the surveys, from which employment, hours and earnings data are produced.

An inter-departmental committee of senior labour economists is preparing recommendations regarding the content and frequency of such a revised survey.

Their recommendations will be reviewed this spring with provincial officials and the approved program will be presented to the Federal-Provincial Committee on Labour Statistics in May.

The design of the methodology and procedures to be used in the survey will start this summer; feasibility testing and evaluation will take place during 1978 and early 1979. The parallel run will take place in late 1979; the revised survey should become fully operational in 1981.

For further information regarding this survey, contact T. M. Cottrell, Special Surveys and Quality Control Section, Labour Division, Statistics Canada, Ottawa K1A 0T6, (613-992-1475).

Vital Statistics: Quarterly Estimates

Since the early sixties, the Vital Statistics and Disease Registries Section has been publishing monthly or, quarterly figures of birth, death and marriage registrations received at the provincial Vital Statistical Offices. At the time the *Vital Statistics* publication was initiated, the registrations received each month or quarter reasonably approximated the number of events that actually took place in the corresponding period. Recently however, due to multiplicity of causes, this no longer seems to be the case.

Recognizing this fact and with the intention of eliminating user-misunderstanding, the Vital Statistics and Disease Registries Section has developed a regression model to estimate the number of events that took place in Canada and the provinces, in each quarter, based on the registrations received. The

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. Figures for the quarters beginning 1975 represent registrations filed at the provincial Vital Statistics Offices during the period under review and could differ from the final figures. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

28 1.1 National Income and Gross National Product
28 1.2 Gross National Expenditure, Current Dollars
29 1.3 Gross National Expenditure, Constant Dollars
29 1.4 Sources of Personal Income
30 1.5 Disposition of Personal Income
30 1.6 Sources and Disposition of Gross Savings
31 1.7 Government Revenue, Expenditure, and Surplus of Deficit, by Level of Government
35 1.8 Implicit Price Indexes
35 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

36 2.1 Real Domestic Product by Industry of Origin, Quarterly
37 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

42 3.1 Canadian Balance of International Payments, Current Account, All Countries
42 3.2 Canadian Balance of International Payments, Current Account, Country Distribution
43 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct: dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj.	Residual error of estimate	GNP at market prices	GNP at market prices excl. accrued net income of farm operators

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note. Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at the end of the month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U.I. benefit, prior to July 1975 included with regular benefit

[1] Vacancies for full-time, casual, part-time, seasonal and temporary jobs which were immediately available. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

Table 12: Average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelt and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period.

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note Components may not add to totals due to rounding differences [1] Data are on a gross basis i e they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

---

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators.

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1]The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2]The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Exports include sea and freshwater fish and shellfish products by exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [3] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

Note: Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies.

---

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form.

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Trade of Canada, Exports (65-004), Statistics Canada.

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage Other important revisions were: Paper and board (44) now excludes woodpulp, Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. [3] Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

Note: Components may not add to totals due to partial revisions

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Chart 2

Operating Public General and Allied Special Hospital Operating Expense per Person Shown in Current Dollars and as a % of Average Personal Income, Canada, 1953 to 1973

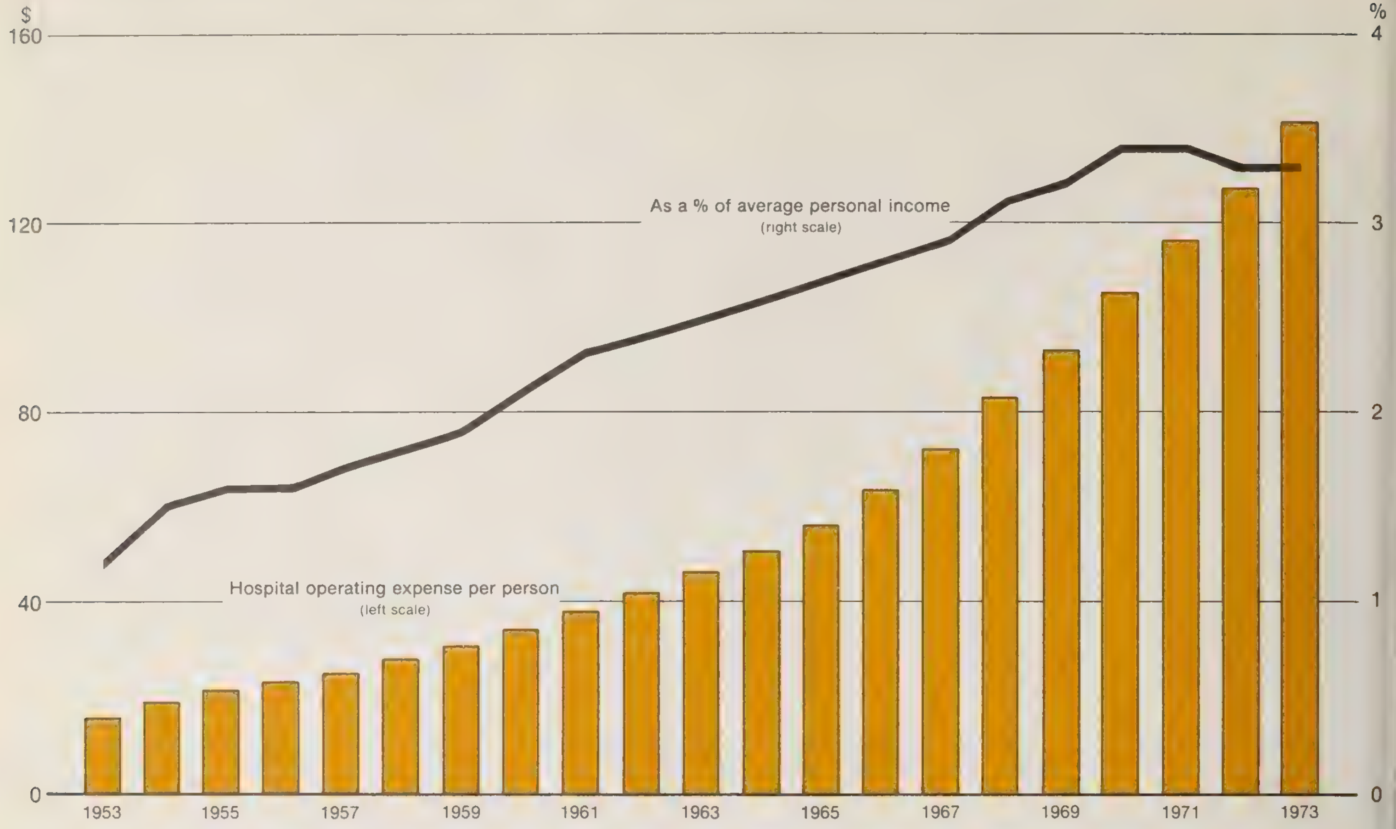

Chart 3

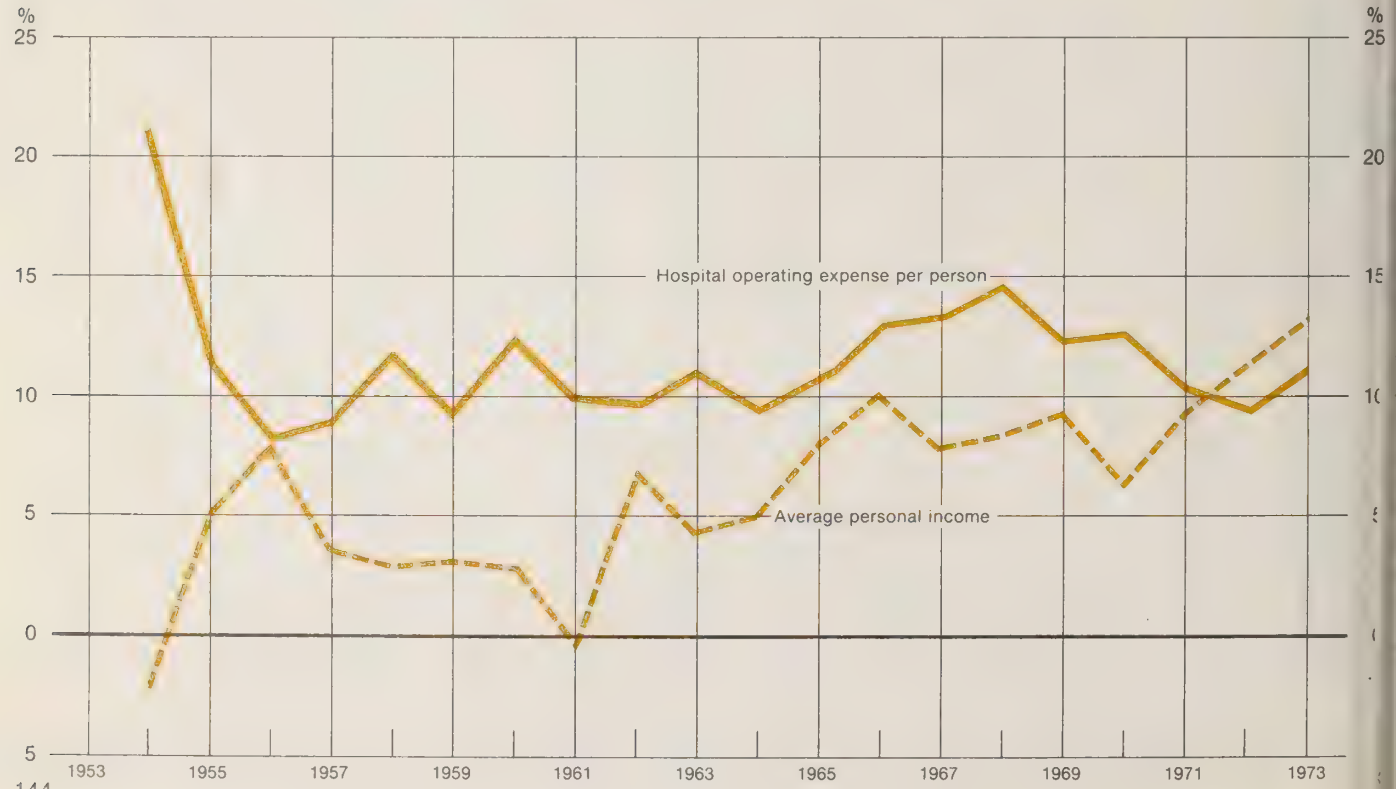
Comparison Between the Percentage Annual Change in Operating Public General and Allied Special Hospital Operating Expense per Person and the Percentage Annual Change in Average Personal Income, Canada, 1954 to 1973



The GNP and hospital expenses show annual variations, while the population is in the form of a regular, decreasing curve. Chart 1 also shows that in 1971, for the first time in sixteen years, the average annual growth rate was higher for the GNP than for hospital expenses.

As shown in Chart 2, the operating expense of public general and allied special hospitals represented 3.3% of the average personal income of Canadians in 1973; this is an increase of 175% over the 1953 figure of 1.2%. Canadians paid an average of close to $142.00 in current dollars from their income in 1973 for public general and allied special hospitals, whereas in 1953 they paid only $16.00. CHART 2 We would perhaps obtain a more accurate indication of the financial burden placed on the average Canadian by using the labour force as the base unit. We find then that the average deduction per member of the labour force was $338.00 in 1973 for public general and allied special hospitals, while in 1953 it was $44.00 (Table III).

TABLE III. Operating Expense of Public General and Allied Special Hospitals per Person, Canada (current dollars)

Year	Per person $	Per member of the labour force $
1953	15.86	43.64
1963	46.72	131.06
1973	141.75	337.52

* See Table 3 for complete series, p. 154.

Regardless of the unit used, we find that until 1970 and 1971 the annual rate of variation in the operating expense of public general and allied special hospitals, per person, was higher than the annual rate of variation of average personal income (Chart 3). In other words, Canadians directed an increasing percentage of their income to the hospital sector. This may reflect their firm desire to increase the quantity and improve the quality of health care services.

In the area of human resources, operating public general and allied special hospitals employed 3.47% of the labour force in 1973. However, although the number of employees increased in absolute terms, it decreased as a percentage of the total labour force.

Table IV shows that in 1969 hospital personnel represented 3.63% of the labour force, and that this percentage gradually decreased to the 1973 level. This is partly due to the increasing percentage of the Canadian population in the labour force (38.86% in 1969 compared to 42.0% in 1973); in fact the labour force is growing more quickly than the population. Although hospital personnel also increased more quickly than the population (from 14.15 per 1,000 population in 1969 to 14.58 in 1973), it could not keep up with the growth rate of the labour force.

Inputs

This section describes the quantity, and in some cases the quality, of the physical and human resources, and the capital used by hospitals in the last two decades. A descriptive rather than an analytical approach is used. However, it is possible to establish some correlations between the various elements in each category.

A. Physical resources

This section examines mainly the general and allied special hospitals in Canada and their total rated bed capacity.

In the public hospital sector as a whole, the number of institutions increased by 18% between 1953 and 1973; the total rated bed capacity of these institutions increased by 33%. The percentage increase in the case of general and allied special hospitals was 22% and 86% respectively. This increase in the

TABLE IV. Comparison Between the Population and Hospital Personnel in Operating Public General and Allied Special Hospitals, Canada

	Labour force		Hospital personnel		
Year	Number	% of the population	Number[1]	% of labour force	Per 1,000 population
1969	8,162,000	38.86	296,176	3.63	14.15
1970	8,374,000	39.33	301,201	3.60	14.14
1971	8,631,000	40.02	308,578	3.58	14.30
1972	8,891,000	40.74	316,318	3.56	14.50
1973	9,279,000	42.00	322,157	3.47	14.58

[1] Includes full and part-time hospital personnel and medical staff.

TABLE V. Average Rated Bed Capacity in Operating Public General and Allied Special Hospitals in Canada

Year	Rated beds	Number of hospitals	Rated beds per hospital
1953	76,224	857	88.9
1963	111,165	976	113.9
1973	142,069	1,049	135.4

* See Table 4 for complete series, p. 155.

number of beds is true not only in absolute terms, but also, and more importantly, with respect to the population. The rated bed capacity per 1,000 population went from 5.13 in 1953 to 6.43 in 1973. These figures vary between the provinces: from 5.80 beds per 1,000 population in Newfoundland to 8.50 in Alberta (see Table 5, p. 156).

In general, this disproportionate increase in the number of beds relative to the number of institutions can be explained by the change in the average size of such institutions in Canada.
As shown in Table V, the average number of beds per hospital went from 89 to 135 between 1953 and 1973. Table VI may explain the change that occurred in this period more clearly.

The first thing we notice in Table VI is that the greatest growth rates were in the groups of hospitals having '300 to 499' beds and '500 or more' beds respectively, while the smallest rates were in the groups of '1 to 24 beds' and '25 to 99' beds. Moreover, in 1953, 74% of hospitals had fewer than 100 beds and only 6.6% had 300 or more beds. In 1973, 64% of hospitals had fewer than 100 beds, and the proportion of hospitals with 300 or more beds more than doubled (14.1%), compared to 6.6% in 1953.

B. Human resources

The total hospital personnel in public general and allied special hospitals increased by 238% between 1953 and 1973 which is an average annual increase of 5.52%. As shown in Table VII there was also an increase in personnel per rated bed.
The personnel per rated bed went from 1.25 in 1953 to 2.27 in 1973; this reflects an increase in patient care. There was a corresponding increase in the paid hours per patient-day between 1963 and 1973.

However, there was also, and more importantly, a higher quality of hospital personnel. In other words, the quality of hospital personnel has improved considerably in the past twenty years. Table VIII shows that the number of graduate nurses per rated bed has more than doubled during the period; this figure was .25 in 1953 and .58 in 1973. Graduate nurses represented 67.4% of the total nursing personnel in 1973, compared to 47.4% in 1953.
This trend can also be seen in specialized groups such as physiotherapists, psychologists, medical staff and occupational therapists. All of these groups have increased by more than five times in the last twenty years, and some have even increased as a percentage of the total hospital staff. These data appear in Tables 7 and 8, p. 158-161.

C. Operating expense

Some reference has already been made in Part I to the operating expense of hospitals. This section will focus on one of the main indicators of hospital expense: operating expense per patient-day.

For public hospitals as a whole, this expense went from $7.72 in 1954 to $63.39 in 1973, which is an increase of 720%. The increase in the case of general and allied special hospitals was smaller (500%), but the expense per patient-day was higher, namely $77.09 in 1973. Table IX shows that general and allied special hospitals are the most costly to operate in terms of expense per patient-day.

The same analysis at the provincial level for all general and allied special hospitals reveals substantial variations in the expense per patient-day. Nevertheless, it is extremely difficult to use these figures as a basis for determining efficiency, since it is virtually impossible to establish the range and quality of services offered by each province. For example, the expense of Ontario and Quebec are among the highest, but perhaps the quantity and quality of their specialized and highly specialized services account for some of the best in Canada (Table X).
The differences can perhaps be explained by other factors such as different salary scales. However, only a more detailed study could establish the exact weight of each factor.

Operating expense consists of four major components:

- gross salaries and wages
- medical and surgical supplies
- drugs
- other supplies and expenses.

TABLE VI. Distribution of Reporting Public General Hospitals[1] by Size of Hospital, Canada

		Bed size of hospital											
		1-24		25-99		100-199		200-299		300-499		500+

TABLE XI. Operating Expense of Operating General and Allied Special Hospitals, Canada

Year	Total expense	Percentage distribution			
		Gross salaries and wages	Medical and surgical supplies	Drugs	Other supplies and expenses
	'000				
1953	235,513	57.7	4.1	4.3	33.9
1963	884,392	63.8	3.1	3.9	29.2
1973	3,131,868	69.7	3.1	2.6	24.6

* See Table 11 for complete series, p. 164.

TABLE XII. Summary of Number of Admissions and Average Length of Stay, Operating Public General and Allied Special Hospitals, Canada

Year	Number of admissions per 1,000 population	Average length of stay (days)
1953	118.6	10.8
1954	125.3	11.1
1955	132.8	10.9
1956	138.0	11.0
1957	139.6	10.7
1958	140.7	10.9
1959	142.7	11.2
1960	144.4	11.1
1961	145.9	11.1
1962	148.0	11.3
1963	151.1	11.5
1964	152.8	11.5
1965	152.2	11.6
1966	152.0	11.7
1967	151.5	11.5
1968	155.1	11.7
1969	156.4	11.7
1970	161.1	11.5
1971	164.9	11.3
1972	164.8	11.1
1973	165.6	10.8

* See Table 13 for complete series, p. 166.

The cost of each component has risen in absolute terms in the last twenty years. However, only the gross salaries and wages have increased relative to the total operating expense (Table XI).

As shown in Chart 4 (p. 151), salaries and wages represented 58% of the operating expense in 1953, and 70% in 1973, or $2,182,912,000 in current dollars. Thus the increased quality of hospital personnel referred to earlier is reflected in an absolute and relative increase in the proportion of operating expense allocated to salaries and wages.

Utilization

This section describes the utilization of resources in the hospital sector. Only the quantitative aspect is discussed since it is the only type of data available.

The number of admissions per 1,000 population in public general and allied special hospitals increased from 119 to 166 between 1953 and 1973, an increase of 39%. However, the average length of stay remained approximately the same, and hence the turnover rate was proportionally the same (Table XII).

As shown in Table XIII, the average daily number of patients in public general and allied special hospitals almost doubled; this indicates a relatively greater increase in the rate of utilization of hospital services by the general public.

These statistics show that the demand for hospital services increased between 1953 and 1973. As we saw earlier, the supply of services also increased in the form of greater material resources and more and better trained personnel.

When we examine the percentage occupancy figures, we find, however, that supply increased faster than demand. We see that the percentage occupancy in general and allied special hospitals dropped from 81.2% to 78.8%. This trend is even more pronounced in some provinces as Table XIV shows.

Summary

The data contained in this paper illustrate the general trends noted in public general and allied special hospitals from 1953 to 1973.

First to be noted is the rise in the operating expenses of these hospitals which, in terms of operating expense per patient-day, have increased sixfold in these two decades. If we compare this rise to the ones observed for the same period in set-up hospital beds (86%), personnel (238%) or the average number of patients per patient-day (238%), the ratios may appear out of scale. To some extent, this can be explained by the fact that almost 70% of the operating expenses incurred by the public general and allied special hospitals represent gross salaries and wages. The hospital personnel has more than tripled from 1953 to 1973, not only in quantity but also from a quality point of view, since many technical and professional groups have increased fourfold and sometimes more than ninefold. Medical technologists, radiology technicians, registered nurses and physiotherapists, to name a few.

During the last two decades, it seems that the variety and availability of hospital services have made rapid

TABLE XIII. Average Daily Number of Patients, Public General and Allied Special Hospitals, Canada

Year	Number	Per 1,000 population

progress along with the introduction of new techniques in order to meet the increased demand of health services.

Glossary

Hospital:

Is defined as an institution where patients are accommodated on the basis of medical need and are provided with continuing medical care and supporting diagnostic and therapeutic services, and which is licensed or approved as a hospital by a provincial government, or is operated by the Government of Canada. This definition includes mental institutions.

Public Hospital:

Public (incl. voluntary, provincial and municipal) – Applies to a hospital recognized by the province as a "public hospital". Such a hospital generally is not operated for profit.

Proprietary: Applies to a hospital owned by an individual or by a private organization, operated for a profit and recognized by the province as a "proprietary hospital".

Federal:

Applies to a hospital owned by a department or agency of the Government of Canada and operated on a non-profit basis.

Allied Special Hospitals:

Includes pediatric, rehabilitation, extended care and other hospitals.

Pediatric – Applies to a hospital which provides for the diagnosis and short-term treatment of pediatric patients, generally 14 years of age and under.

Rehabilitation (including convalescent) – Applies to a hospital which provides primarily for the continuing assessment and treatment of patients whose condition is expected to improve significantly through the provision of physical medicine and other rehabilitative services.

Extended care (including chronic) – Applies to a hospital which provides primarily for the continuing treatment of patients with long-term illness or with a low potential for recovery and who require regular medical assessment and continuing nursing care.

Other – A hospital which provides primarily for the treatment of a limited range of diseases or injuries, or which restricts admissions to a particular age group or sex. Examples of such specified categories may include orthopaedic, maternity, neurological, cancer hospitals. A hospital which provides a combination of various types of service and cannot be classified in any one of the foregoing categories is included in this group. "Other" also includes nursing stations and output hospitals.

Patient day:

The period of service to an impatient between the census-taking hours on two successive days; the day of admission is counted as a patient-day but the day of separation is not.

Rated Bed Capacity:

The number of beds and cribs (bassinets) which the hospital is designed to accommodate on the basis of established standards of floor area per bed (bassinet) as at December 31 of the reporting year.

(Tables 1 to 16 are presented p. 152 to 169.)

---

[1] Hospital Operating Expense for 1953 and 1954 are net figures, the others are gross.

TABLE 3. Summary of Public General and Allied Special Hospital Operating Expense Tabulated per Person and as a Percentage of Average Personal Income and GNP, Canada, 1953 to 1973

		Hospital Operating Expense		
Year	Hospital Operating Expense as a % of GNP	Per Capita in Current Dollars	Per Member in Labour Force in Current Dollars	As a % of Average Personal[1] Income
1953	0.91	15.86	43.64	1.2
1954	1.13	19.22	53.49	1.5
1955	1.18	21.47	60.08	1.6
1956	1.17	23.25	64.47	1.6
1957	1.25	25.34	70.06	1.7
1958	1.39	28.33	78.85	1.8
1959	1.47	30.99	86.79	1.9
1960	1.62	34.83	97.08	2.1
1961	1.76	38.33	107.21	2.3
1962	1.82	42.07	118.18	2.4
1963	1.92	46.72	131.06	2.5
1964	1.96	51.21	142.50	2.6
1965	2.01	56.67	155.89	2.7
1966	2.07	64.04	172.75	2.8
1967	2.23	72.65	192.41	2.9
1968	2.38	83.28	217.71	3.1
1969	2.46	93.64	240.94	3.2
1970	2.62	105.56	268.47	3.4
1971	2.69	116.54	291.23	3.4
1972	2.69	127.59	313.14	3.3
1973	2.63	141.75	337.52	3.3

[1] The average personal income data was derived from the GNP Division, Statistics Canada. The data is tabulated as of June 1st of each year and includes all transfer payments and all unincorporated business.

TABLE 4. Summary of the Rated Bed Capacity of All Operating Public Hospitals, by Type of Hospital – Canada, 1953-1973

		General and Allied Special					
Year	All Public Hospitals	Total	General[1]	Chronic Convalescent and Rehabilitation	Other Allied Special	Mental	Tuberculosis

(continued from page 10)

model has been tested with the quarterly data for Canada and the provinces for the past 12 years. The results show that, excepting two isolated instances, empirically the technique has given highly satisfactory results.

Relatively, it is found that the variation between the actual and the estimated counts was less in respect of deaths than either marriages or births; marriages are showing greater variation than births.

It was observed that in 73 out of 132 (55.3%) annual birth estimation cases, the difference between the estimated and actual counts was less than 1%; in 91.7% of the cases the difference was less than 3%. Respective percentages for marriage and death estimates were 21.2, 59.9 and 59.1, 92.4.

It was found that the estimates were relatively more efficient in 2nd and 3rd quarters for births, 3rd and 4th quarters for marriages and 2nd and 4th quarters for deaths. These peculiarities are being further investigated.

Beginning with the fourth quarter of 1976, the estimates generated by the regression model will replace registrations that are presented in the publication *Vital Statistics* (Catalogue No. 84-001) and in the CANSIM data base. In addition, as and when the actual counts of events are available, these quarterly estimates will be revised.

For further details on methodology and rationale of estimation procedure contact D. Nagnur, Vital Statistics and Disease Registries Section, Health Division, Statistics Canada, Ottawa K1A 0T6, (613-995-0864).

Staff Changes at Statistics Canada

Special Surveys Coordination Division:

Mr. Peter Hicks, Director, Special Surveys Coordination Division, has left Statistics Canada for a position with the Treasury Board Secretariat. Formerly director of the Labour Force Survey Division, he initiated the revision project which has resulted in major significant increases in the information available about the labour force and has substantially enhanced analytical capability of the survey. In his most recent position, he established a survey management group offering services to other government departments, and was responsible for the 'Rule of Ten', through which new survey activity in federal departments is coordinated.

User Advisory Services Division:

Mr. Denis Boudreau, formerly of the federal Department of Consumer and Corporate Affairs, has been appointed Regional Advisor in Montreal, effective December 20, 1976.

Miss Helen Fitzgerald, previously in the Economic Research Department of a major Canadian bank, has been appointed Regional Advisor in Toronto, effective December 6, 1976.

Mrs. Doreen Lawrance has been appointed Regional Advisor in Regina, effective January 4, 1977.

Mr. Doug Newson, formerly a Regional Advisor in Toronto, has been appointed Regional Advisor in Vancouver, effective January 4, 1977.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
V. Berlinguette – Assistant Chief Statistician, Business Statistics Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other cataogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed ree of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review*, Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Section 13, Table 10 – Commercial Failures and Liabilities

This table has been reintroduced with this issue.

National Income and Expenditure Accounts
Fourth Quarter and Annual 1976 – Preliminary Estimates

Fourth Quarter:

Gross National Product, seasonally adjusted at annual rates, increased 1.6 per cent in the fourth quarter to a level of $189.7 billion; after adjustment for price changes, however, real GNP fell 0.6 per cent. Most of the drop in real output can be attributed to a substantial decline in the volume of exports and, less significantly, to a deceleration in inventory accumulation. There was also a drop in government real current expenditure.

Personal Expenditures

While most expenditure components declined in the fourth quarter, personal expenditure on goods and services continued to expand, increasing 1.6 per cent in real terms. With the exception of services, there were fairly large increases in all the major personal expenditure subcomponents. The largest were in spending on semi-durable and non-durable goods, both of which grew 2.2 per cent. Expenditure on durables was up 1.8 per cent, largely as a result of higher spending on cars and automotive products. Service expenditure increased only 0.8 per cent, which was due in part to a low level of net travel expenditure abroad.

Fixed Capital Formation

Real gross fixed capital formation increased 2.3 per cent after a very weak third quarter. Business investment in machinery and equipment was up 8.5 per cent but again, this followed an extremely weak third quarter. The impact of the rise in machinery and equipment was also tempered by the fact that it appeared to be due mostly to imports of investment goods rather than to shipments from domestic producers. Business investment in non-residential construction fell 1.0 per cent in the fourth quarter, the fourth consecutive decline. Investment in residential construction fell 1.3 per cent following a vigorous but short-lived recovery from its depressed level in 1974 and early 1975.

Inventory Investment

The value of physical change in inventories fell to $236 million in the fourth quarter, after an accumulation of $620 million last quarter. Most of the change took place in business non-farm inventories, where a fairly large increase in wholesale inventories was partially offset by decumulation of retail and manufacturing stocks.

The External Sector

The deficit in the balance of trade in goods and services increased to $5.9 billion (at annual rates) from $2.7 billion last quarter. Most of the deterioration in the trade balance occurred in the merchandise component and was the result of a substantial drop in exports rather than a rise in imports. The largest declines were in wheat, iron ore, woodpulp and motor vehicles. The worsening of the service account was due to a large increase in interest and dividend payments. In real terms, exports fell 5.6 per cent while imports rose 1.4 per cent.

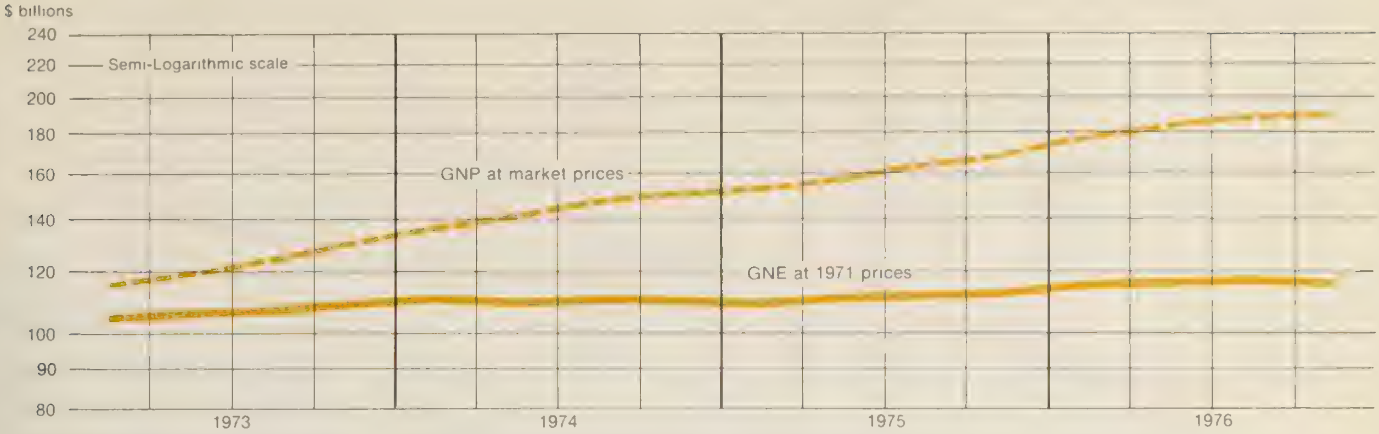
The Government Sector

Total revenue of all levels of government combined (excluding intergovernment transfers) increased marginally in the fourth quarter after an increase of 6.6 per cent the previous quarter. An increase in revenues from personal direct taxes was offset by a decline in revenues from corporation direct taxes.

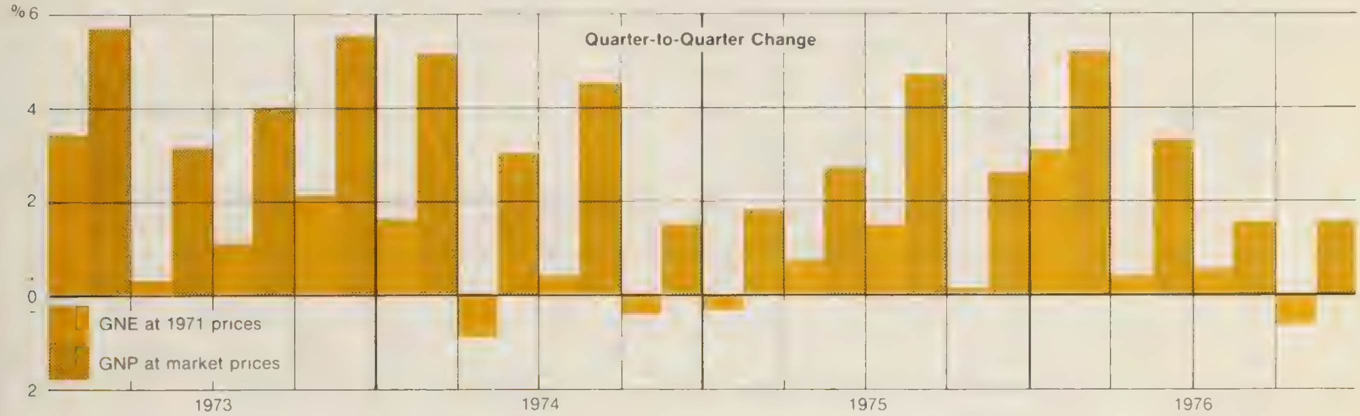
Total expenditure of all levels of government combined rose 3.5 per cent during the quarter. Current outlays on goods and services increased 5.2 per cent, partly as a result of retro-active wage payments, particularly at the local and hospital levels of government. Transfer payments to persons rose 4.2 per cent with a large increase occurring in unemployment insurance benefits. Subsidy payments declined sharply.

The increased level of government expenditure combined with a virtually unchanged level of revenue resulted in the government deficit on a national accounts basis growing to $5.1 billion.

Gross National Product at Market Prices was $184.5 billion in 1976, an increase of 14.5% over the previous year: in real terms GNP increased 4.6%.

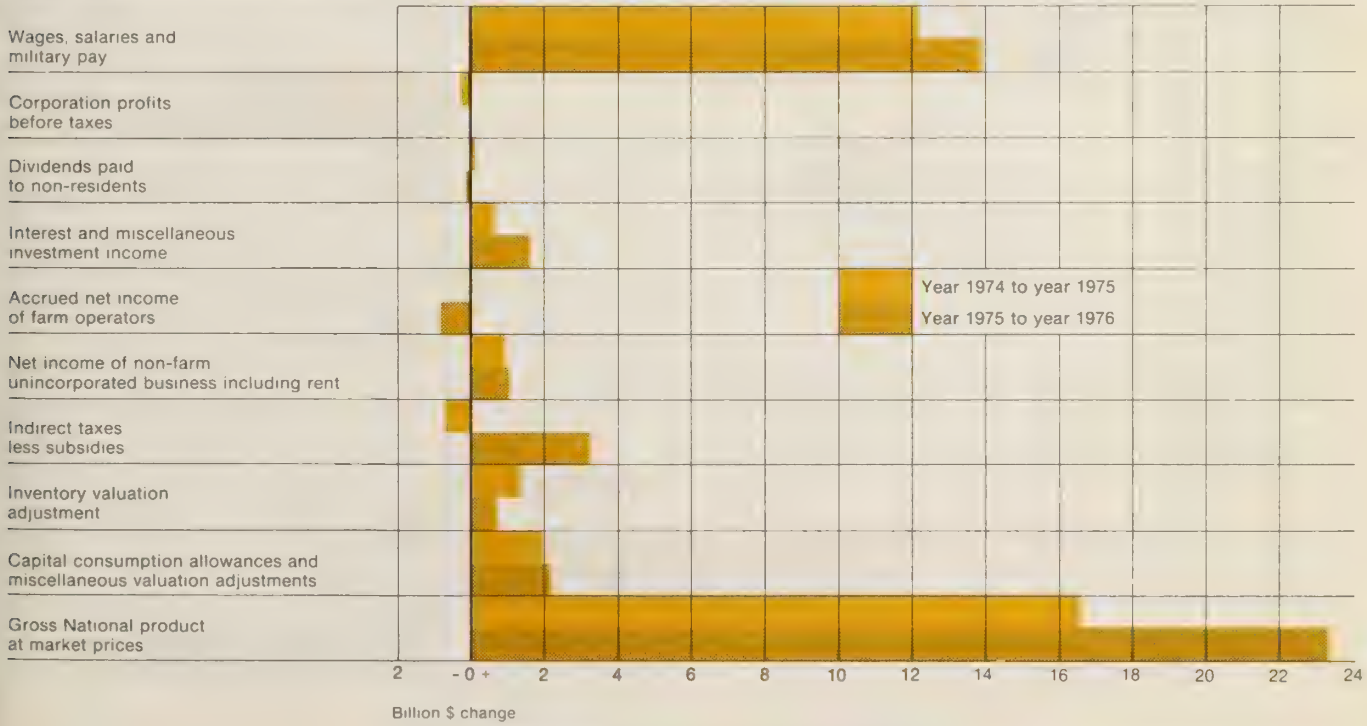


In the fourth quarter of 1976, GNP showed an increase of 1.6%, the same percentage increase as the third quarter: in real terms GNP decreased by 0.6%.



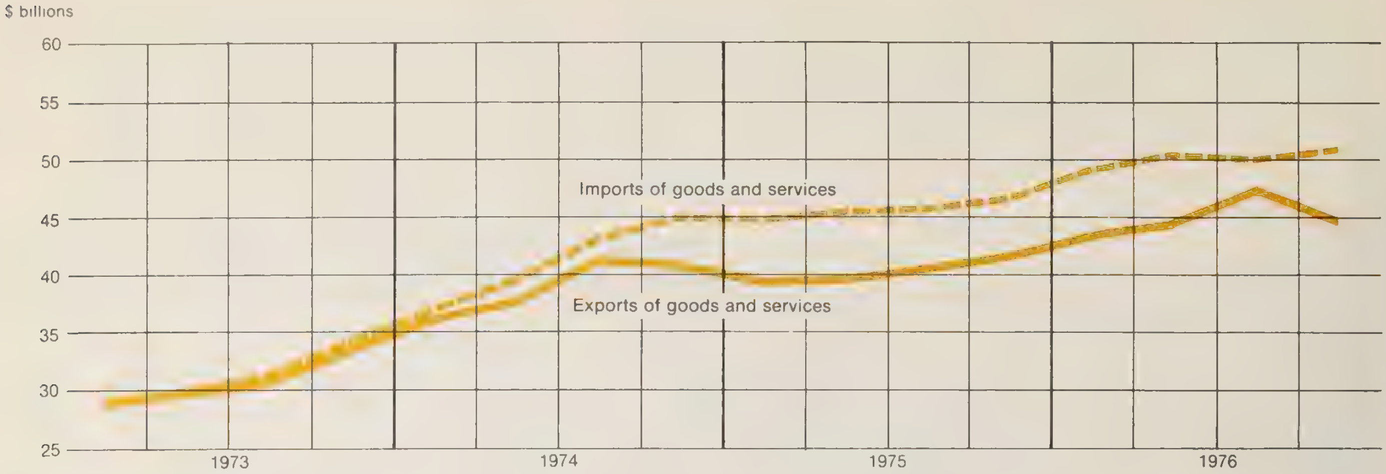
Labour Income including Military Pay increased 15.1% in 1976, after an increase of 15.3% in 1975. Corporation Profits were unchanged in 1976. This was an improvement over the 1975 decrease of 1.1%.

Annual changes in GNP and components

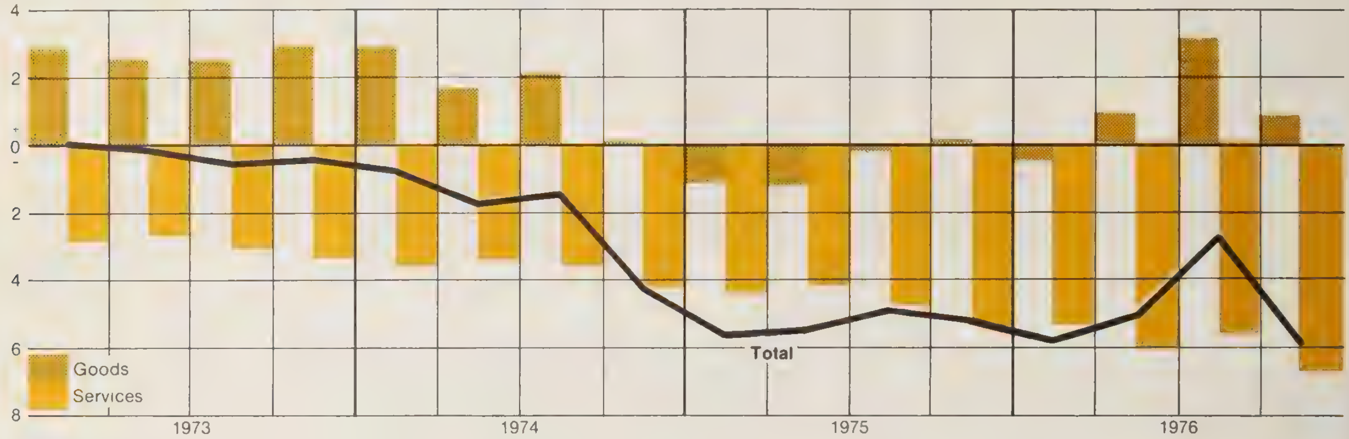


All quarterly data adjusted for seasonal variation and at annual rates

Increases of 12.7% in Exports and 10.1% in Imports resulted in a trade deficit of $4,870 million in 1976 compared to a deficit of $5,371 million in 1975.

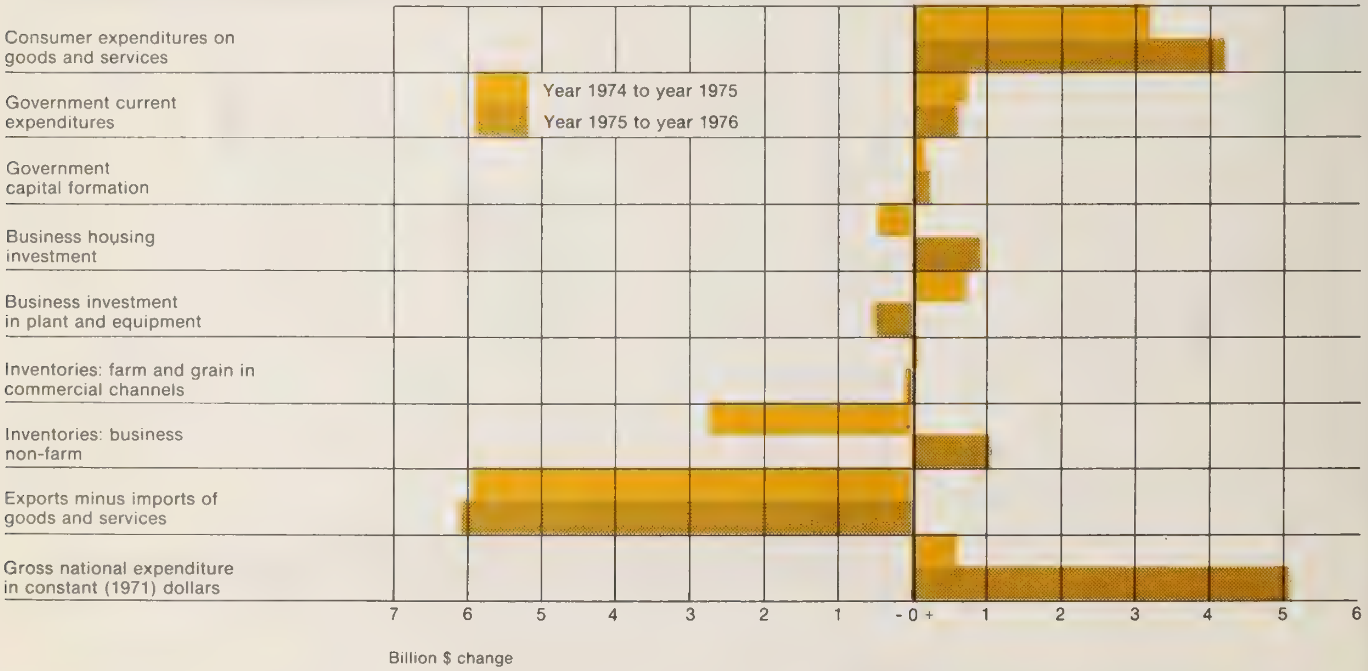


A sharp fall of 5.2% in Exports and 1.6% increase in Imports in the fourth quarter resulted in a widening of the trade deficit to $5,928 million at Annual rates.



Consumer Expenditure on Goods and Services increased a strong 1.6% in real terms, while Business Investment in Plant and Equipment rose 4.3%. These increases were not enough to offset a decline in Government Current Expenditure, a decrease in the rate of business inventories accumulation and a substantial worsening in the trade balance.

Annual changes in GNE and components in constant (1971) dollars



All quarterly data adjusted for seasonal variation and at annual rates.

Observations

Measuring Financial Market Activity: A Macroeconomic Perspective[1]

James F. McCollum*

The principal table described in this article was developed with a view to satisfying two types of recurring demands for information received by the Financial Flows Section of Statistics Canada. Some users wanted a group of broad summary aggregates which could be used to describe and interpret financial activity in very simple terms and which would avoid the morass of detail that make up the Financial Flows Accounts[2]. There were also those users who wanted a measure of ultimate or final borrowing or of a basic credit flow which avoided double counting due to the financial intermediary system. Despite some imprecision it is possible to construct a set of financial aggregates which summarizes the flow of credit through organized credit markets, isolates double counting, and which draws attention to the importance of financial intermediaries as conduits for credit flows. The summary credit market activity table cannot, of course, be all things to all users and depending on the ultimate use, it may be useful to focus on different aggregates from those presented in this article.

The first section of this article discusses the construction of the Financial Market Summary table (Table 1). The second section focuses on the accounting linkages among the principal financial aggregates in the table and the flows of saving and investment found in the National Income and Expenditure Accounts.

Summary Measures of Financial Activity

The Financial Market Summary table (p. 150) is an aggregation of financial flows data designed to provide a synopsis of credit market activity in time series form. The top portion of the table focuses on, but is not limited to, borrowing by the non-financial sectors of the economy[3].

Only flows through what may be termed organized credit markets are included. Other forms of borrowing such as inter-company claims and trade credit which are not part of organized credit markets are excluded. Flows through organized credit markets are intrinsically more interesting, since they are a result of deliberate lending and borrowing decisions, are subject to more regulations, and can be more accurately measured than non-market oriented transactions. The principal aggregate in the table is "total borrowing by non-financial borrowers" (line 7). It is this aggregate which most closely approximates the notion of final or ultimate borrowing in the table[4]. The purpose of this aggregate is to obtain a measure of the total flow of credit to borrowers over a period of time, which avoids double counting due to the domestic financial intermediary system.

---

* James F. McCollum is Chief of the Financial Flows Section, Financial Flows and Multinational Enterprises Division, Statistics Canada.

[1] This article is in many ways the product of discussions held by the group of Financial Statisticians' Committee on Financial Markets at O.E.C.D. Without implicating them in any shortcomings that this article may have, the author would like to acknowledge their contribution. Assistance was also provided by various members of the staff of the Financial Flows Section.

[2] A detailed set of financial accounts known as the *Financial Flows Accounts* (Catalogue 13-002) is published on a quarterly basis by Statistics Canada. These accounts which are a component of Canada's System of National Accounts, represent an extension of the *National Income and Expenditure Accounts* (Catalogue 13-001) into transactions in financial items. The capital finance account of the National Income and Expenditure Accounts is the bridge which links the two sets of accounts. See *National Income and Expenditure Accounts, Volume 3: A Guide to the National Income and Expenditure Accounts (Definitions-Concepts-Sources-Methods)*, Ottawa, Statistics Canada, Catalogue 13-549E, p. 309-311.

A summary version of the *Financial Flow Accounts*, in matrix form, appeared in the *Canadian Statistical Review* on a regular basis until approximately one year ago; table 1.1 in the *Financial Flow Accounts* is identical in form to the matrix which appeared in the *Canadian Statistical Review*.

At that time it was decided to drop the quarterly financial flows matrix from the *Review* in favour of a simplified set of macrofinancial accounts which focus on credit market activity. Lying behind this decision was the impression that readers of the *Canadian Statistical Review* would find summary financial information presented in time-series form more useful than the financial flows matrix which is difficult to interpret without the full complement of sector and category tables which appear in the *Financial Flow Accounts*.

[3] The table is primarily concerned with the market for primary securities. The nomenclature is that of Gurley and Shaw. See, J.G. Gurley and E.S. Shaw, *Money in a Theory of Finance*, Washington D.C., Brookings Institution, 1960.

While "total borrowing by non-financial sectors" is the principal macro-financial aggregate in the table, it is useful to break this aggregate down into a number of sub-aggregates; sector and instrument detail is provided in the table. Borrowing by provincial governments via the social security system is considered to be non-market oriented and is excluded from the table. Borrowing by domestic non-financial sectors is subtotalled and appears as a separate entry in the table (line 5), since it is anticipated that it is this aggregate which is the most closely related to domestic expenditure flows[5].

Moving down the table, borrowing by the domestic financial sector is added to obtain a measure of total funds raised in organized credit markets by all sectors. While this introduces an element of double counting into the table, the financial sector is introduced at this point for two reasons. Since the lending data which appear in the bottom portion of the table do not distinguish between financial and non-financial borrowers, the inclusion of the financial sector's borrowing activity ensures that the table balances with total funds raised being identically equal to total funds supplied. The financial sector is also added at this point to permit the determination of the net amount of funds raised on various markets. This gives the table added flexibility since it thus has a market focus as well as a sector focus.

"Total funds supplied" which appears in the bottom portion of the table measures the asset increase of the immediate lending sectors in respect of the same conventional credit market instruments encountered in the top portion of the table. It should be noted that the table does not measure final or ultimate lending but rather immediate lending[6]. Total lending has been broken down by major lending sectors, which permits an approximate separation between direct and indirect financing activity. Total lending has not been broken down by instrument in the table, although this could be done. Additionally the table as it stands provides no information on intermediary sources of funds either by sector or by instrument.

Saving, Investment and the Flow of Finance

This section explores the accounting linkages between the financial aggregates for credit market activity developed in the previous section of this article and savings and investment as they appear in Canada's National Income and Expenditure Accounts.

Table II follows the same basic format as Table I and allows one to place credit market flows in better perspective by relating them to some closely connected and familiar national accounting aggregates. Sources of funds appear in the top portion of the table and uses of funds in the bottom portion. The non-financial sectors have been aggregated into a single sector and sources and uses[7] other than credit market instruments have also been included. The residual error of estimate of the National Income and Expenditure Accounts,[8] is separately identified in Table II (p. 151).

Sources of funds include: gross saving, the issuance of credit market instruments, and incurrance of other financial liabilities such as payables, claims, etc. For the financial sector "other financial claims" is a major source of funds since, for the purposes of this table, deposit inflows and increases in life insurance and pension reserves are included here.

For an individual sector, uses of funds include: gross fixed capital formation and inventory accumulation, net purchases of existing and intangible assets, the acquisition of financial assets in the form of credit market instruments appearing in Table I, as well as the acquisition of other financial claims including deposits.

---

[4] Ibid.

[5] Foreign investments (category 3530) which appears as a credit item in the rest-of-the-world sector in the financial flow accounts, consists in large measure of foreign shares, although other items are also included. Since a breakdown is not available, this item is included in stocks for the rest-of-the-world sector in Table I. The corresponding debit item, is category 2530 in the financial flow accounts and it is included in the lending portion of Table I.

[6] The concept of final or ultimate lending is not very precise in theory and in practice. What can be measured fairly readily is the increase in financial assets of the domestic non-financial sectors. It is difficult to go beyond this however, since it does not seem possible to introduce either the foreign sector or the financial sector in an unambiguous manner.

[7] In the table, reductions in liabilities appear as a negative source of funds and reductions in financial assets appear as a negative use of funds. This convention is followed by necessity, since the data are originally collected in the form of balance sheet information and only the net change in financial assets and liabilities can be calculated.

[8] See *National Income and Expenditure Accounts*, op. cit., Table 8: "Sources of Gross Saving, by Quarters", and Table 9: Disposition of Gross Saving, by Quarters.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506 [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction [4] Includes a small number in non-specified occupations [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

---

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. Figures for the quarters beginning 1975 represent registrations filed at the provincial Vital Statistics Offices during the period under review and could differ from the final figures. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

28 1.1 National Income and Gross National Product
28 1.2 Gross National Expenditure, Current Dollars
29 1.3 Gross National Expenditure, Constant Dollars
29 1.4 Sources of Personal Income
30 1.5 Disposition of Personal Income
30 1.6 Sources and Disposition of Gross Savings
31 1.7 Government Revenue, Expenditure, and Surplus of Deficit, by Level of Government
35 1.8 Implicit Price Indexes
35 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

36 2.1 Real Domestic Product by Industry of Origin, Quarterly
37 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

42 3.1 Canadian Balance of International Payments, Current Account, All Countries
42 3.2 Canadian Balance of International Payments, Current Account, Country Distribution
43 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1–Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

[1] Includes the taxes on life insurance companies introduced in 1969 At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966 Refunding of the tax began in 1968 [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

---

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at the end of the month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U.I. benefit, prior to July 1975 included with regular benefit

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C is used [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage Adjustments are made for establishments on shift work, etc [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers, however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

Section 6 · Manufacturing

78 1. Total Inventories, Shipments, Orders
79 2. Manufacturing Shipments, Selected Industries
81 3. Manufacturing Inventories, Selected Industries
83 4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification
84 5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification
85 6. Manufacturing Goods in Process and Finished Products by Economic Use Classification
86 7. Tobacco and Beverages
86 8. Rubber
87 9. Rubber Products
87 10. Raw Hides, Skins, Finished Leather
88 11. Footwear Production
89 12. Production of Sawn Lumber
89 13. Pulpwood, Wood Pulp and Newsprint
90 14. Primary Iron and Steel
91 15. New Motor Vehicles
92 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
92 17. Radio and Television Sets

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments[1]	New orders received during month[2]	Unfilled orders at end of month	Inventory at end of month						Ratio of inventories owned to shipments
				Owned[3]	Held but not owned	All inventory held				
						Total	Raw materials	Goods in process	Finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in lar intermittent shipments; for these a monthly estimate of work put in place has been estimated.

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period.

[1] 100 cu ft of solid wood, pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

Note Components may not add to totals due to rounding differences [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators.

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1]The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2]The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

Note: Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit.

[2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges.

[3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges.

[4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges.

[5] Includes bank-sponsored credit card balances.

[6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form.

[7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies.

[8] Bills due for non-commercial use of telephones, gas and electric power.

[9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form

---

[1] Column numbers refer to tables 3 and 4 section 11 [2] Includes special transaction-trade, not shown separately [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

Source: Trade of Canada, Exports (65-004), Statistics Canada.

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note. Components may not add to totals because rounding [1]This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated The current allocation of cheques cashed continues to reflect what had been the previous centres, however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2]Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares.

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

(continued from page 8)

Incomes

Wages, salaries and supplementary labour income rose 4.1 per cent in the fourth quarter, and this increase, together with the rise in government transfer payments, was responsible for personal income growing 3.0 per cent. Personal disposable income increased 2.8 per cent and since personal expenditure on goods and services in nominal terms grew at virtually the same rate, the personal saving rate was unchanged from last quarter.

Prices

The rate of increase of the GNP implicit price index was 2.2 per cent, after an increase of 1.1 per cent in the third quarter. Much of the acceleration in prices was due to retro-active government wage payments, which resulted in the government current expenditure implicit price index rising 6.4 per cent after a decline of 2.4 per cent last quarter. The personal expenditure implicit price index increased at a very moderate rate of 1.2 per cent, and the implicit price index for gross fixed capital formation slowed to a 1.6 per cent rise from 2.0 per cent last quarter.

Annual Report — 1976:

The decline in real GNP in the fourth quarter followed two quarters of weak growth and left the economy operating at virtually the same level of output as in the first three months of the year. The recovery from the recession of 1974-75 had received a substantial boost in the first quarter of 1976 from massive inventory accumulation, and real output expanded by 3.1 per cent in that quarter. The rate of stock building was not sustained, however, and the real growth rate slowed to a modest 0.4 per cent in the second quarter. The slowdown in inventory accumulation during the second quarter almost balanced large increases in exports and personal expenditure. Both of these major expenditure aggregates continued to grow at relatively healthy rates in the third quarter, but a large decline in gross fixed capital formation resulted in the persistence of sluggish growth for the economy as a whole since the first quarter of 1975.

The net result of these quarterly movements was that real GNP in 1976 was 4.6 per cent higher than in the previous year. In current dollar terms, GNP reached a level of $184.5 billion, up 14.5 per cent from 1975.

The increase in real GNP in 1976 was largely the result of strong growth in personal expenditure, and as a result, it grew to 63.7 per cent of total expenditure compared to 62.7 per cent of total expenditure in 1975. A moderate volume of inventories was accumulated, and the resulting swing of almost one billion dollars from the year before added about 0.9 percentage points to the growth rate. There was also a large increase in export volume, but imports increased by about the same amount so that the balance of trade in goods and services did not contribute to the rise in real output. Gross fixed capital formation was up only slightly over 1975 and the small increase that did take place was due almost entirely to growth in residential construction in the first half of the year.

Personal Expenditures

Personal expenditure on goods and services increased 13.7 per cent in 1976 to a level of $108.1 billion; in real terms, this represents an increase of 6.3 per cent, compared with 4.9 per cent in the previous year. After a very strong year in 1975, growth in personal expenditure on durable goods slowed to 5.7 per cent. Much of the deceleration can be explained by slower growth in sales of new passenger vehicles, furniture and household appliances. Spending on non-durable goods increased 7.9 per cent, as sales of food and energy all rose in volume, and expenditure on semi-durable goods was also strong, growing 8.6 per cent. Spending on services increased 4.4 per cent in real terms, about the same rate as last year.

Fixed Capital Formation

Real gross fixed capital formation grew only 0.8 per cent in 1976. Government fixed investment fell 6.0 per cent as a result of a substantial decline in non-residential construction, which is by far the largest component of government capital formation. Business gross fixed capital formation increased 2.2 per cent, but this was almost entirely the result of a large increase in residential construction. Business non-residential construction fell 6.8 per cent, and investment in machinery and equipment rose a marginal 0.5 per cent. 1976 was the second consecutive year in which there was only a very small increase in fixed investment, and its weak performance is partly responsible for the less than robust state of the recovery. The recent survey of intentions of Private and Public Investment indicates a 10.4 per cent growth in plant and equipment in 1977, but some of this may be due to projects that were postponed because of a record number of man-days lost in industrial disputes in the last half of the year.

Inventory Investment

About $650 million dollars in inventories were accumulated in real terms in 1976, almost all of which occurred in business non-farm stocks. This followed decumulation of over $300 million in the previous year.

The External Sector

Exports of goods and services increased 9.5 per cent in real terms after falling in the two previous years, which made it the strongest expenditure component in 1976. The impact of the strong export performance was offset by the fact that imports grew 8.1 per cent, so that net exports measured in real terms actually declined during the year. This is not, however, an unusual occurrence during a recovery. The service component of imports, which includes items such as foreign debt servicing and travel abroad, grew at a higher rate than did the merchandise component. The balance of trade in goods and services, measured in current dollars, was in deficit by $4.9 billion in 1976, compared with $5.4 billion in the previous year.

The Government Sector

Total revenues of all levels of government combined (excluding intergovernment transfers) increased 14.0 per cent in 1976, with large increases at all levels of government. Revenues from direct taxes from persons and indirect taxes accounted for most of this growth and generally reflected rate increases at the provincial and local levels of government.

Total government expenditure grew 13.6 per cent, compared with increases of 20.8 per cent and 24.0 per cent in 1975 and 1974, respectively. Spending on goods and services rose 14.2 per cent, largely as a result of increases in wage and salary payments, which account for almost 60 per cent of total government expenditure on goods and services. Transfer payments to persons increased 14.5 per cent with the strongest growth at the provincial level. Federal transfers to persons rose 7.5 per cent, the smallest increase in recent years. The deficit of the government sector as a whole, on a national accounts basis, rose slightly to a level of $4.3 billion.

Incomes

Labour income grew 15.2 per cent in 1976, about the same rate of increase as in 1975. Wages and salaries in goods-producing industries increased 11.7 per cent, again about the same rate of increase as in the previous year, while wages and salaries in service-producing industries grew 15.8 per cent.

Corporation profits before taxes were unchanged in 1976 after a slight decline in the previous year. A smaller percentage of total profits, however, was accounted for by windfall inventory gains. Net income of non-farm unincorporated business increased 12.4 per cent, with the largest increases in retail trade, construction, and community and personal services. Accrued net income of farm operators was down 21.3 per cent, as the value of grain, livestock and other farm production declined while operating expenses continued to rise.

Personal income increased 13.9 per cent in 1976 after a 15.9 per cent rise in 1975. Most of this growth was accounted for by the increase in labour income, but there was also a large increase in interest, dividends and miscellaneous investment income. Personal disposable income grew at a slightly lower rate primarily as a result of an increase in personal income tax payments.

Prices

The rate of change of prices of domestically produced output slowed during the year, as the implicit GNP price index rose 9.4 per cent after a 10.8 per cent increase the previous year. The largest price increases occurred in government current expenditure, the implicit price index for which grew 13.4 per cent, and in gross fixed capital formation, where prices increased 9.2 per cent. The large rise in the government implicit price index was distorted by several large retro-active wage payments made during the year. The implicit price index for personal expenditure moderated to an increase of 7.0 per cent after a rise of 10.3 per cent the previous year; a relatively small increase in the price of goods was partially offset by a 9.6 per cent increase in service prices.

---

[1] Excludes profits of government business enterprises.
[2] Includes the withholding tax applicable to this item.
[3] Includes profits (net of losses) of government business enterprises and other government investment income.
[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the changes in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.
[5] Includes net income of independent professional practitioners.
[6] See footnote 4, Table 2.

---

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts, Fourth Quarter* (Catalogue 13-001)

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises Excludes defence construction and equipment which are defined as current expenditure

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change The difference between this value of physical change and the change in book value is called the inventory valuation adjustment (See line 8, Table 1)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1) All other items in the farm inventories series are seasonally adjusted by standard techniques

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

(continued from page 10)

Total gross savings as it appears in the National Income and Expenditure Accounts can be obtained by aggregating gross savings in Table II. Taking into account the residual error of estimate, gross saving is identically equal to gross investment (including the physical change in inventories) as it appears at the bottom of the table and in the National Income and Expenditure Accounts. Net purchases of existing assets sum to zero by definition. The dual facet of financial instruments, both as a liability and as a financial asset ensures that borrowing in the form of financial claims and credit market instruments is identical to lending in these same forms[9]. Aggregates such as total sources and total uses of funds contain double counting and are interesting primarily as accounting relationships rather than as meaningful aggregates in their own right.

Conclusion

In Canada, summary measures of financial activity have received an increasing amount of attention in recent years. In their official publications, the Department of Finance[10], the Bank of Canada[11], and Statistics Canada[12], all make use, to some extent, of summary measures of credit market activity to describe and interpret financial developments in Canada. There has also been an increase in the use of macro-financial measures by business economists in the private sector of the economy, particularly at the larger financial institutions. The use of summary measures of financial activity are, of course, not limited to Canada and have been used for many years in the United States[13], and Sweden[14]. Recently a set of financial market summary tables was adopted by the Organization for Economic Cooperation and Development for inclusion in their regular publication of financial statistics.[15]

Statistics Canada has found that the summary of financial activity table provides a convenient and simple basis for developing the quarterly commentary on financial activity in Canada which appears in the *Financial Flow Accounts* (Catalogue 13-002). Our experience has been similar to that of the United States in that there has been a relatively widespread demand for summary measures of the flow of funds and that a number of users have experienced difficulty in using and interpreting the detailed sector and financial instrument tables in the absence of such aggregates. Table I, the principal table in this article, will soon appear in the *Canadian Statistical Review* on a regular basis.

Instructions on how to construct the financial summary table from either published data in the *Financial Flow Accounts* (Catalogue 13-002) or from CANSIM series are available free of charge, upon request. Inquiries should be directed to: Statistics Canada, Financial Flows and Multinational Enterprises Division, Financial Flows Section, 21st Floor, R.H. Coats Building, Ottawa, Ontario, K1A 0T6.

---

[9] An error commonly made by casual users of financial statistics is to attempt to construct a financial aggregate which matches the flow of savings and which indicates in what form savers have accumulated financial assets. It should be clear from Table II, however, that no such aggregate exists in theory or in practice.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
V. Berlinguette – Assistant Chief Statistician, Business Statistics Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

An Econometric Model of Canadian Imports

Janice Haritos*

During the last fifteen years, Canada's foreign trade has expanded substantially, increasing at a faster pace than Canadian production. The volume of total imports, which nearly tripled in that time span, has increased from 19 per cent of Gross National Expenditure in 1961 to 27 per cent in 1975. The volume of total exports during that time expanded from 17 per cent to 21 per cent of Gross National Expenditure.[1]

Furthermore, major changes have occurred in the structure of Canada's trade in response to changing demand and supply conditions. By far the most dramatic change in trade activity has been in the area of automotive products, as a result of the Canada-U.S. Automotive Agreement signed in 1965; however, the commodity mix of Canada's trade with all markets has changed substantially during this period.

After negative balances in goods and services during all of the years 1953-1969, the current account balance turned positive in 1970 and 1971. However, it returned to deficit in 1972 and the last three years have shown particularly large deficits: 2.0 billion dollars in 1974, a record-breaking 5.4 billion dollars in 1975 and 6.8 billion dollars in 1976. This situation in the current account can be traced to both merchandise and non-merchandise trade. The merchandise trade balance, which registered an average annual surplus of 2.4 billion dollars for the 1970-1974 period, dipped sharply negative in 1975 to record the first deficit in the merchandise account in fifteen years. This development was largely a result of cyclical forces; however, further investigation of its causes is warranted. On the other hand, the non-merchandise trade balance has not only been negative every year since 1951, but has shown a rapidly increasing deficit. The service account deficit reached a record 4.7 billion dollars in 1976.

In summary, the facts that (a) the Canadian economy is very open to external influences and is becoming increasingly more so as its trade sector expands; (b) major changes are occurring in the commodity structure and direction of Canada's trade flow; (c) a balance of payments deficit has emerged in the last three years in the overall current account, and the chronic deficit on the service account is growing at a rapid rate; and (d) international trading relationships are entering a period of uncertainty arising in part from the "energy crisis", demonstrate a pressing need for models of the structure of Canada's trade flows, for the purpose of analyzing balance of payments determinants, forecasting trade flows, and formulating international trade strategy.

The present study presents a model of the imports side of the current account. Although models of Canada's external trade sector have been developed within the framework of several major quarterly macroeconomic models, such as the Conference Board's AERIC model[2], the University of Toronto's Quarterly Forecasting Model[3], and the Bank of Canada's RDX2 model[4], the model presented here attempts to improve on the published versions of these models in the following ways.

First, unlike most econometric studies of the foreign trade sector which focus primarily on the merchandise items to the neglect of the non-merchandise trade, this model places a great deal of emphasis on the service import sector. Such emphasis is warranted in view of the fact that these transactions in the last ten years have comprised 28 per cent of all imports, a relatively substantial proportion. As well, the upward trend in the deficit on the service account makes a knowledge of its determinants of special importance to policymakers.

---

* Janice Haritos is a research economist in the Current Economic Analysis Division, Statistics Canada. This study is a part of the macroeconometric model building program of the Econometrics Section, Current Economic Analysis Division. The author wishes to thank Dr. Philip Smith for many helpful comments and Ruth Hoyt for her research assistance.

Secondly, the merchandise import sector has been disaggregated into eight commodity groupings based on an end-use classification. This degree of disaggregation is greater than that in most existing macro models and is of particular importance in obtaining better estimates of price elasticities, as well as being inherently useful for studying changes in the composition of import commodity flows.

Thirdly, a refinement in the way of measuring income effects has been achieved by the use of the Canadian input-output tables to convert domestic demand components into implied import demand requirements by commodity grouping.

Another feature which deserves special mention is the inclusion of capacity pressure variables as explanatory variables in the model. Some researchers[5] have argued that the fixed coefficients input-output model is inadequate to account for all cyclical variations in trade, in that imports may experience a relative increase during periods when there is close to full capacity utilization in the importing country. In a fully competitive world, one might expect these influences to be felt through changes in relative prices, but this need not be the case in a world with frictions, oligopoly and "administered prices". Conversely, the pressure of demand in the exporting country, since it affects the ease with which production may be directed into export lines and the urgency with which firms may pursue foreign markets for their goods, may be expected to have a negative effect on imports.

The empirical results presented in this paper constitute a fairly disaggregated and comprehensive econometric description of Canadian imports. There are 16 equations covering approximately 99 per cent of the import account. The next section of this paper presents the merchandise import sector equations. Here, the theory is developed and formalized, followed by a discussion of the data and the treatment of lags in adjustment. Subsequently the equations are presented and discussed. The third section of the paper presents the results for the non-merchandise sector. Since each component has its own unique characteristics, the theoretical development and the discussion of the empirical results are presented separately for each service component.

Merchandise Imports

The Model

In accordance with standard theory, the demand in one country for a good imported from a second is postulated to depend on the level of activity in those sectors of the importing country which consume that good, and the price and non-price characteristics of substitutes for that good. Non-price influences which should find a place in the demand function include various measures of the pressure of domestic demand on the appropriate sectors of both the importing and the exporting country.

The basic equation for import demand may be specified as follows:

$$M^d_i = a_0 + a_1Q_1 + a_2Q_2 + a_3Q_3 + a_4Y_i + a_5PM_i/PD_i + a_6EDD_i + a_7EDF_i + e_t \quad (1)$$

$$a_4, a_6 > 0;\ a_5, a_7 < 0$$

where M^d_i is the volume of imports of the ith commodity group; Y_i is the appropriate real income or output variable for determining the demand of the ith commodity; PM_i is the import price index of the ith commodity, expressed in Canadian dollars; PD_i is the index of competing domestic prices for the ith commodity; EDD_i is an appropriate measure of domestic demand pressure on the economic sector producing the ith commodity in Canada; EDF_i is an appropriate measure of domestic demand pressure on the economic sector producing the ith commodity in the exporting country; Q_1, Q_2 and Q_3 are seasonal dummy variables; e_t is the random error term.[6]

The Data

Imports are divided into eight groups based on an end-use classification compiled under the direction of the Bank of Canada and are expressed in millions of constant 1961 dollars.[7] The import price indexes[8] used to deflate the import commodity groups are Laspeyres indexes.

Two alternative types of activity variables were tested in the equations. In the first instance, National Accounts demand aggregates most closely matching the import categories were tried; for example, invest-

---

[5] See, for example, R.G. Gregory, "United States Imports and Internal Pressure of Demand: 1948-68", *American Economic Review*, March 1971, pp. 28-47.

[6] A disturbance term is required for two reasons: first, we can never hope to distinguish or quantify all the relevant factors in any relationship, and so the net effect of all the excluded, less important variables, which is hopefully small, is represented by e_t; secondly, even if all of the relevant factors could be included, it might be assumed that there is a basic element of randomness in any economic relationship, which can be characterized only by an "error term".

Observations

The Input-Output Structure of the Canadian Economy, 1961-1971

This report presents annual Input-Output Tables for Canada, and covers the years 1961-71. Estimates for the years 1972-74 are currently under preparation and are scheduled for completion by mid-1978. Input-Output Tables for the post 1974 period will follow.

Preliminary Input-Output Tables for the year 1961, along with a descriptive text, were published in 1969 in two volumes: *Input-Output Structure of the Canadian Economy, 1961; Vol. I* (Catalogue 15-501), *Vol. II* (Catalogue 15-502). The categories of final demand were highly aggregative – only net exports, re-exports, imports, value of physical change in inventories and "other final demand" were shown. Since then "other final demand" has been elaborated to show 40 categories of consumer expenditure, 39 categories of machinery and equipment, 40 categories of construction, six categories of government expenditure and six categories of government revenue. The inventory data have also been disaggregated into two categories. In total, there are now 136 categories of final demand at the most detailed level.

Input-Output Tables for the period 1961-66 were published in January 1976 *The Input-Output Structure of the Canadian Economy, 1961-66* (Catalogue 15-505). This present report supersedes Input-Output Tables published in the three earlier reports (Catalogue Nos. 15-501, 15-502 and 15-505).

Three tables have been prepared and presented for each year: (1) Make Matrix, (2) Use Matrix, and (3) Final Demand Matrix. At the most detailed level, the system has been balanced with 191 industries, 595 commodities and, as noted, 136 categories of final demand. In addition there are seven primary inputs: wages and salaries, supplementary labour income, net income of unincorporated business, other operating surplus, commodity indirect taxes, other indirect taxes and subsidies. At this level of detail many of the entries in the various matrices are confidential under the provisions of the Statistics Act. Though all the tables are prepared at the L level of aggregation, it is only at aggregation level S and M that we publish these tables. The dimensions of these aggregations are given below:

Designation of aggregation	Number of industries	Number of final demand categories	Number of commodities and primary inputs
S	16	14	49
M	43	14	100
L	191	136	602

Tables at aggregations S and M are presented in this volume. Some cells of the Make Matrix at aggregation M are confidential. These cells have been suppressed though industry totals and commodity totals have been preserved. However, complete Make Matrix (including confidential cells) has been used for the calculation of impact tables presented in this volume.

As noted, the Make Matrix (matrix of the values of commodity outputs), Use Matrix (matrix of the values of intermediate commodity inputs as well as primary inputs) and Final Demand Matrix are presented for each year. Chapter 1 gives the detailed conceptual framework of the Canadian Input-Output Tables, and contains a description of these matrices and their inter-connections; it also outlines the relationship of these Accounts to the System of National Accounts. Chapter 2 describes the sector, industry, commodity and final demand classification systems. The Appendix on Aggregation Parameters for the Input-Output Tables gives a listing of the industry and commodity and final demand detail at the L aggregation level and indicates the derivation of the various aggregations. This Appendix is thus complementary to Chapter 2. Chapter 3 discusses the special definitions used in the Input-Output Tables, noting the treatment adopted and the cases where such definitions differ from the ones used in the other subsystems of the Canadian System of National Accounts. Chapter 4 deals with the Input-Output Model and explains its specification in terms of the accounting framework used in the Canadian Input-Output Tables.

The Input-Output Structure of the Canadian Economy, 1961-1971 (Catalogue 15-506E) can be obtained from Publications Distribution, Statistics Canada, Ottawa, Ontario K1A 0T6. Price: $5.25

Inquiries about this publication should be addressed to K. Lal, Director, Input-Output Division, Statistics Canada, Ottawa, Ontario K1A 0T6, (613-992-3641).

Mortality Differences in Canada, 1960-1962 and 1970-1972

This study represents the first presentation and analysis of differences in mortality according to size group of residence or locality and covers the periods 1960-1962 and 1970-1972. The report is the result of an agreement entered into by the Minister of Health and Welfare Canada and Statistics Canada.

Although Canadian mortality data and life tables have been published regularly over many years by Statistics Canada, the geographic divisions usually considered were Canada and/or the provinces. This report represents the first attempt to group mortality data as closely as possible according to the census classification of size groups of residence. The residence size groups used in this study were the following; under 2,500 population, 2,500-4,999, 5,000-9,999, 10,000-29,999, 30,000-99,999 and 100,000 and over. Unfortunately it was not possible to deal with rural mortality separately since geographic codes on the mortality records were not sufficiently detailed to distinguish it from that of localities ranging from 1,000-2,499 population.

On the basis of expectation of life at birth and age and/or age-sex standardized rates specific for cause or groups of causes of death, differences in mortality among different size groups of residence have been examined. Tests for statistical significance of differences have been applied. Sex differences and changes in patterns of mortality during 1960-1962 and 1970-1972 have also been examined.

The introductory chapter contains a brief review of the findings of similar studies carried out in earlier years, in England and Wales and the United States. Chapter II presents a brief discussion of sources of data and methodology and Chapter III the results and analysis. A detailed explanation of the methods used and a discussion of the precision of the results are presented in the appendices. Abridged life tables are presented for each size group of residence by sex, for the two time periods.

As the first study of its kind in Canada, the results of *Mortality Differences in Canada, 1960-1962 and 1970-1972* will be received with great interest by demographers and those in the field of health. It is available (Catalogue 84-533) from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6. Price: $1.40.

Further information regarding this study may be obtained from K.G. Basavarajappa, Content and Analysis Branch, Census Field, Statistics Canada, (613-994-5796) or Joan Lindsay, Vital Statistics Section, Health Division, Statistics Canada, (613-995-0864).

Creation of the Science Statistics Centre

As a result of an agreement between Statistics Canada and the Ministry of State for Science and Technology, the Science Statistics Centre has been established. It will be an integral part of Statistics Canada but one unit, which deals with the public sector, will be located in the same building as the Ministry of State for Science and Technology. Basically, the Centre is composed of the former Science Statistics Section of the Education, Science and Culture Division.

This new arrangement will provide Statistics Canada with more direct and continuous access to information available at the Ministry of State for Science and Technology. The Ministry will benefit from the participation of Statistics Canada in its collection and analysis of information.

The Centre will be staffed by personnel of Statistics Canada. Data will continue to be collected under the Statistics Act and protected by that Act and, in addition, by the Official Secrets Act. As before, no one will have access to individual returns or identifiable information unless authorized under the Statistics Act.

Comments or requests for more information should be addressed to H. Stead, Chief of the Science Statistics Centre at 995-3014.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. Figures for the quarters beginning 1975 represent registrations filed at the provincial Vital Statistics Offices during the period under review and could differ from the final figures. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

28 1.1 National Income and Gross National Product
28 1.2 Gross National Expenditure, Current Dollars
29 1.3 Gross National Expenditure, Constant Dollars
29 1.4 Sources of Personal Income
30 1.5 Disposition of Personal Income
30 1.6 Sources and Disposition of Gross Savings
31 1.7 Government Revenue, Expenditure, and Surplus of Deficit, by Level of Government
35 1.8 Implicit Price Indexes
35 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

36 2.1 Real Domestic Product by Industry of Origin, Quarterly
37 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

42 3.1 Canadian Balance of International Payments, Current Account, All Countries
42 3.2 Canadian Balance of International Payments, Current Account, Country Distribution
43 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1–Income and expenditure accounts

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $ 1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U.I. benefit, prior to July 1975 included with regular benefit

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelt and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period.

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators.

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

Note Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies

Note: Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form.

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

[1] Column numbers refer to tables 3 and 4, section 11 [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months [3] Includes special transaction-trade, not shown separately [4] Includes scrap [5] Some series such as General purpose machinery have been revised to ensure consistent coverage Other important revisions were. Paper and board (44) now excludes woodpulp, Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. [3] Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

Note: Components may not add to totals due to partial revisions

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

[1] For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1973-74 **Source: The Canada Gazette and Dept. of Finan**

(continued from page 7)

ment expenditures on machinery and equipment were used to explain imports of producers' equipment. In the second case, the 1966 Canadian input-output table was used to convert 18 components of final domestic demand in constant dollars into constant dollar estimates of the "import requirements" of each of the import commodity groups. This estimated import requirement of each commodity was then employed as the activity variable in the import demand equation for that commodity. Because the inventory component of gross national expenditure is extremely volatile in its size and composition, it was not included as one of the final domestic demand components (the impact of the 1966 configuration of inventory demand on imports would not be representative of the impact of inventory demand on imports in other years). Thus, inventory change variables matching as closely as possible each import commodity group, and alternatively the aggregate change in inventories were included as additional activity variables.

Relative price terms were constructed by expressing the fixed weight unit value index of each import commodity category as a ratio to a price index for the domestic equivalents. The variables used to capture the influence of excess domestic demand pressure were measures of capacity utilization produced by the Construction Division at Statistics Canada[9] for manufacturing industry, and alternatively, ratios of unfilled orders to shipments in the various manufacturing sectors of the economy.[10] To capture the effect of domestic demand pressure in the exporting country, similar measures for the United States were included in the specifications.

The one remaining issue to be discussed concerns the treatment of lags in adjustment. Since it is based on quarterly data, the analysis contains the strong presumption that adjustment toward equilibrium is not instantaneous but rather takes some time to be fully realized. The reasons for this are clear: contracts often extend over periods of several months, time lags in information flow and transportation exist, and so on. However, some previous investigators have not accepted the hypothesis of widespread adjustment lags. For example, Officer[11] and Officer and Hertubise[12] both assume that there is no lag in the reaction of imports or exports to movements in the activity variables. They argue that the decision to reduce or increase imports from a particular supplier in line with the movement activity was a relatively easy one and that in the case of U.S.-Canada trade, this was particularly true in view of the short distances and close corporate links involved.

The manner in which imports respond to price cannot be as simple as in the case of activity. The decision to change a source of supply depends not only on current prices but on how prices have moved over time. Therefore, experiments were conducted with distributed lags on price, up to four quarters in length, using the Almon technique, in the development of the merchandise equations. Activity variables were entered without lags.

One significant empirical contribution to the knowledge of the determinants of Canadian merchandise imports which deserves special mention is a quarterly model built by Gopal Yadav for the 1956-72 period[13] using the same Bank of Canada disaggregation. Although this study places special emphasis on the lagged adjustment process, its adoption of the Koyck lag scheme is restrictive in that the same adjustment pattern is implied for both the income and price effects.[14]

The Results

A summary of the results obtained in estimating the parameters of equation (1) using quarterly data from the period 1964 to 1974 for each of the import classes (except for the motor vehicles and parts class for which the period was 1967 to 1974) is presented in Table 1, p. 144 . The implicit income and long-run price elasticities of demand (calculated at the means)[15] are shown in Table 2, p.146 .

Capacity Utilization Rates in Canadian Manufacturing, Catalogue 31-003, quarterly, Statistics Canada.

[11] L.H. Officer, *An Econometric Model of Canada under the Fluctuating Exchange Rate,* Cambridge, Harvard University Press, 1969

[12] L.H. Officer and J.R. Hertubise, "Price Effects of the Kennedy Round on Canadian Trade", *Review of Economics and Statistics,* August 1969, pp. 320-333.

By the term "elasticity" is meant the responsiveness of the dependent variable to changes in one of the explanatory variables. For example, if a one per cent increase in one of the explanatory variables gives rise to a two per cent increase in the dependent variable, then the elasticity with respect to that explanatory variable is two. When the elasticity exceeds one (in absolute value), responsiveness is said to be "elastic"; when it is less than one, responsiveness is "inelastic". In linear models, the elasticities will vary, depending upon the particular values assumed by the explanatory and dependent variables. In this paper, all elasticities are evaluated at the mean values of these variables, over the sample period.

[13] Gopal Yadav, "A Quarterly Model of the Canadian Demand for Imports 1956-72", *Canadian Journal of Economics,* August 1975, pp. 410-422.

[14] This model does not incorporate many of the features that have been included in the present study: the use of the input-output tables to estimate "import requirement" activity variables, the inclusion of excess demand variables, the disaggregation of automobile imports by country of origin (United States and other) to take into account the autopact agreement between Canada and the United States, and the estimation of an equation for other transportation equipment.

[1] Equations 8 and 9 explaining imports of motor vehicles are estimated for the period 1967 Q1 - 1975 Q1.

[2] First-order moving average correction.

[3] Millions of 1961 dollars.

KEY TO TABLE 1

Activity variables

Y_1 to Y_7 are synthetic "import requirement" variables generated for each commodity group by summing 18 weighted components of final demand, in constant dollars; the weights are derived for each group from the 1966 Canadian input-output tables. Y_8 is consumer expenditure on automobiles in 1971 dollars. Y_9 is exports of motor vehicles to the U.S. in 1971 dollars. Y_{10} is the change in non-farm business inventories in 1971 dollars. Y_{11} is the change in inventories of durable consumer goods in 1971 dollars.

Relative price variables

P_1 is the ratio of the import price index of fuels and lubricants to the industry selling price index of fuels and lubricants.
P_2 is the ratio of the import price index of industrial materials to the GNP deflators of consumption and government expenditure.
P_3 is the ratio of the import price index of construction materials to the price index of non-residential building materials.
P_4 is the ratio of the import price index of producers' equipment to the GNP deflator for investment in machinery and equipment.
P_5 is the ratio of the import price index of other transportation equipment to the GNP deflator for investment in machinery and equipment.
P_6 is the ratio of the import price index of consumer goods – food to the GNP deflator for consumer expenditure on non-durable goods.
P_7 is the ratio of the import price index of other consumer goods (excluding motor vehicles) to the GNP deflator for consumer expenditure excluding expenditure on motor vehicles.
P_8 is the ratio of the import price index of motor vehicles and parts from countries other than the U.S. to the GNP deflator for consumer expenditure on motor vehicles.

Excess demand variables

ED_1 is the rate of capacity utilization for the manufacturing industry. ED_2 is the ratio of unfilled orders of machinery and equipment to shipments of machinery and equipment. ED_3 is the ratio of unfilled orders of consumer durables to shipments of consumer durables. $EDUS_1$ is the gap between potential and actual output in the U.S.

Dummy and other variables

Q1, Q2 and Q3 are conventional seasonal dummy variables. DASTK is 1 in 1970:4; 0 otherwise and represents the effects of the auto industry strike in that quarter. IPMVUS is the index of production of motor vehicles and parts in the U.S. T is a time trend variable.

Summary statistics

DW is the Durbin Watson statistic. RHO is the estimated coefficient of first-order autoregression in the errors. SER is the standard error of the regression. Figures in brackets are ratios of the estimated parameters to their respective standard errors. The dependent variables are in millions of 1961 constant dollars.

TABLE 2. "Income" and Price Elasticities of Demand for Real Merchandise Imports

Equation	"Income" Elasticity	Price Elasticity
Fuels and lubricants	0.62	-0.15
Industrial materials	0.96	-0.42
Construction materials	*	-1.74
Producers' equipment	1.23	-1.16
Other transportation equipment	1.49	*
Food	1.10	-0.38
Other consumer goods	1.30	-1.40
Motor vehicles and parts from the U.S.	1.37	*
Motor vehicles and parts from other countries	0.66	-1.13

* the elasticity calculated is not significantly different from zero at the 5 per cent level of significance.

The activity variables generated by using the input-output tables generally outperformed the simple National Accounts demand aggregates and, in addition, contributed to an increase in the level of significance of the price terms that were included. It was also found that the concept of demand pressure had considerable ability to explain the behaviour of imports.

The income elasticity of demand estimates for the import groups range from a low of .62 for imports of fuels and lubricants to a high of 1.49 for transportation equipment other than motor vehicles. The long-run price elasticity estimates range from a low of -0.15 for imports of fuels and lubricants to a high of -1.74 for construction materials. Generally, the estimated price elasticities accord with *a priori* expectations: the demand for fuels and lubricants and food are price inelastic while the demand for other consumer goods and motor vehicles from overseas are price elastic. Imports of industrial materials are highly influenced by non-price considerations.

Non-Merchandise Imports

Travel Payments

In accordance with standard consumption theory, the real amount spent on foreign travel is postulated to depend positively on real income and negatively on the prices of goods and services consumed while travelling abroad, relative to those at home. The costs of transportation are also expected to influence foreign travel through their effect on the decision whether to undertake travel or not.

Several special events occurred during the period under consideration which might bring out temporary changes in Canadian foreign travel expenditures: EXPO 67 provided a domestic alternative to foreign travel and thus tended to reduce spending abroad by Canadian residents; conversely, EXPO 70 held in Japan would lead to greater foreign spending by Canadian residents. In addition, the fuel shortage resulting from the oil embargo in the latter part of 1973 and early 1974 would tend to reduce travel in the United States by Canadian residents, as would also a strike by CP airline workers that occurred in the third quarter of 1973.

Two travel payments equations – one explaining travel payments to the United States and the other explaining travel payments to other countries – are presented in Table 3 (p.148).

The elasticity at the means of real travel payments to the United States with respect to real consumption expenditure on services is 1.15 while the elasticity of travel payments to other countries with respect to real disposable income is estimated to be 1.19. These estimates conform with *a priori* expectations that foreign travel expenditures are income elastic. Although no significant price effects (at the 5 per cent level of significance) could be found for travel payments to the United States, the elasticity of real travel payments to other countries with respect to relative price is estimated to be -1.20. Both dummy variables introduced to capture the effects of EXPO 67 and EXPO 70 entered the equation explaining payments to other countries significantly and with the correct signs. None of the transportation cost variables tried (such as air fare rates) entered either equation significantly.

Freight and Shipping Payments

The principle explanatory variable for freight and shipping payments is the quantity of merchandise imported. Other variables such as freight rates, the types of imports and the degree of participation of Canadian carriers in international transportation activities also determine the size of freight and shipping expenditures; however, these data are difficult to obtain and, with the exception of a price proxy for U.S. rail freight rates, are taken as constant in the model. Equation 3 in Table 3 relates freight and shipping payments in current dollars to total merchandise imports in current dollars and a price proxy for rail freight rates in the United States. The assumption underlying the use of current dollar measurement is that freight charges are assessed uniformly on the value of trade. Furthermore, it is assumed that the demand for U.S. rail services is price inelastic and as a result the sign on the freight rate term is expected to be positive.

Interest Payments

The interest payment account as defined by the Canadian Balance of Payments is composed of interest paid on funded debt (federal, provincial, municipal and corporate) held by non-residents. Payments abroad of interest are a function primarily of the amount of outstanding debt held by non-residents and the interest rates attaching to it, as well as of the exchange rates applicable to debt payable in foreign currency.

The major explanatory variable in the model for interest payments is a synthetic interest payments series which has been developed by weighting data on international flows of new issues, retirements, and trade in outstanding Canadian bonds by type (federal, provincial, municipal and corporate) by appropriate averages of the present and past interest rates attached to each of these components, and then accumulating. Equation 4 in Table 3 presents the results for this service component.

The elasticity of interest payments with respect to the synthetic interest payment series is 1.07 and is not significantly different from the *a priori* expected value of 1 at the 1 per cent level of significance. The elasticity of interest payments with respect to the exchange rate is calculated at 1.54.

Dividend Payments

Dividend payments to non-residents constitute one of the more variable elements of the service account. Dividends paid to non-residents by companies controlled in Canada are determined by the extent of foreign ownership of the shares, the earnings of the company, and the extent to which such earnings are distributed as dividends. However, dividends paid abroad by companies controlled by non-resident owners are determined by the same factors, plus several additional ones. The distribution of earnings of foreign controlled companies is a decision subject to the direction of their foreign parents and the transfer of profits from subsidiaries to parent companies are subject to a great range of considerations such as varying requirements for cash between divisions of a multinational enterprise, actual or expected changes in taxation or exchange rates, and so on. In short, payments of dividends by a wholly owned subsidiary or branch, unlike those by a public company, are not a final distribution of resources, but rather a reallocation of them between related parts of the same enterprise.

Dividend payments abroad are expected to bear a positive relationship to total capital invested by non-residents in Canada and to the earnings of these investments. Therefore, major explanatory variables in the equation for dividend payments include measures of the stock of foreign ownership of Canadian companies and various measures of earnings available for distribution as dividends such as cash flow, corporate profits after taxes, and measures of rates of profit. Additional variables such as growth rates in fixed investment as an indicator of attractive re-investment opportunities in Canada (thus depressing dividend remittances) and lagged exchange rates as a proxy for exchange rate expectations were included in the specification.

Equation 5 in Table 3 presents the empirical results for dividend payments. The elasticity at the means of dividend payments abroad with respect to the stock of foreign investment is estimated to be 1.26. The long-run elasticity of dividends paid with respect to profits is .49.

Other Service Payments

"Other service payments" is a heterogeneous category which accounted for 31 per cent of total service payments in the 1965-1974 period.

The largest component is business and professional services. An important determinant of business and professional services consists of corporate links with non-resident companies via direct investment. A large segment of the flow refers to payments by a branch or subsidiary to the head office abroad for designing, engineering, accounting, advertising and other services. This suggests that the stock of foreign direct investment in Canada may be an explanatory variable for other service payments. Because of the financial links between companies in Canada and abroad, the stock of direct investment may also affect miscellaneous income transfers.

1. Fourth-order autoregressive correction.

KEY TO TABLE 3

Activity variables

Y_1 is consumer expenditure on services in 1971 dollars. Y_2 is real disposable income. Y_3 is total merchandise imports in current dollars. Y_4 is sum of total imports and total exports in current dollars.

Price variables

P_1 is the ratio of the price index of goods and services consumed in the U.S. by Canadian travellers adjusted for the exchange rate to the price index of goods and services consumed by travellers in Canada. P_2 is the ratio of a weighted sum of the consumer price indices of France, West Germany, Italy and the United Kingdom adjusted for their respective exchange rates to the price index of goods and services consumed by travellers in Canada. P_3 is the price index of U.S. railroad wage rates.

Other variables

DEXPO67 is a dummy variable for EXPO67. DEXPO70 is a dummy variable for EXPO70. SB is the stock of Canadian bonds held by non-residents weighted by the interest rates attached to the various issues. EUS is the foreign exchange rate: number of Canadian dollars per American dollar. SF is the stock of foreign investment in Canada. F is the after-tax profit of industrial corporations. R is the chartered bank prime interest rate. IDP is total interest and dividend payments to non-residents.

Summary statistics

DW is the Durbin Watson statistic. RHO is the estimated coefficient first-order autoregression in the errors. SER is the standard error of the regression. Figures in brackets are ratios of the estimated parameters to their respective standard errors. The dependent variables are in millions of current dollars except for travel payments which are in millions of 1961 constant dollars.

Other service payments should be related to the general level of activity in Canada. Several alternative measures are available each with its own emphasis such as business fixed investment or total gross national expenditure, as well as Canada's total merchandise trade, which is an indicator of general international interdependence. Because business and professional services comprise a large proportion of other service payments, wage rates may be an important factor. And since the miscellaneous income component consists of items such as interest payable on debt such as inter-company and bank loans, and mortgages, interest rates suggest themselves as a possible explanatory variable. To the extent that some of the services are contracted in foreign currency terms, the exchange rate should exert an effect on other service payments.

Equation 6 in Table 3 presents the empirical results for this heterogeneous component of the non-merchandise account.

Withholding Taxes

Withholding taxes levied on investment income payments to non-residents are included in the imports of goods and services account as defined by the National Income and Expenditure Accounts in order to assign this item to earnings of non-resident factors of production.

Withholding taxes account for approximately 4 per cent of the service import sector. Clearly withholding taxes are related to the size of interest and dividend payments to non-residents and to the rates of tax levied on these income distributions.

The empirical results are presented in equation 7 of Table 3.

Reading Habits in Canada

Yvon Ferland*

According to Jacques Rigaud, the presence of books in our daily lives should be the prerequisite for a rebirth of cultural activity[1]. Others, such as MacLuhan, might be less inclined to that view; the fact remains, however, that books have played, and still do play, an important role in our cultural universe. Since a book requires a reader, any attempt to discuss the importance of books in Canada must include an examination of the time Canadians spend reading.

Consideration of readers obviously does not imply a desire to overlook authors, publishers, bookstores and everybody else involved in one capacity or another in the book trade in Canada. There are already statistics on publishers, bookstores and libraries,[2] and we hope that statistics will soon be obtained on authors also. However, we wish here to consider specifically the time which Canadians devoted to reading *as a leisure activity,* during the summer of 1975.

Our information in this respect is derived from a survey of approximately 30,000 Canadians, aged 14 years and over, who were chosen at random from all parts of the country. The survey covered a number of leisure activities engaged in during the summer (July and August) and the fall (September and October) of 1975.[3]

In this article we have referred solely to summer activities, as the survey did not indicate significant seasonal variations. We found, for example, that the average time spent reading was the same in September and October as in July and August: 35 minutes per day.

We first asked respondents if they had read, *as a leisure activity,* one or more books during the twelve months from October 1974 to October 1975. We were thus able to identify those respondents who usually included reading in their leisure activities. We then asked this group how much time they generally devoted to reading each week during July and August. From the answers given, we computed the average time which each Canadian aged fourteen years and over devoted to reading. The time is given in minutes per day in column 1 of Table I.

When the average time for the whole population aged 14 years and over is calculated, significant provincial differences are noted. Between the two extremes, the average for Quebec and the average for British Columbia, there is in fact a spread of 88 per cent.

These variations may be due either to the number of "readers" in a particular province or to the time they spend reading. Obviously, both factors may come into play at the same time. We shall try to examine them more closely.

Column 2 of Table I indicates the percentage of respondents aged 14 years and over, by province, who said they read *for leisure.* Provincial disparities, in this respect, are very similar to the observed variations in the time spent reading. This means that one province may record a high average reading time because it has many "readers", and another may record a low average because it has relatively few.

In order to examine the effect non-readers have on the average reading time, we calculated the average daily reading time per "reader". The results are given in column 3 of Table I.

As Table I shows, the range is 88 per cent for the population as a whole, aged 14 years and over, but

---

* This article was prepared by Yvon Ferland, Assistant Director, Cultural Sub-division, Education, Science and Culture Division, Statistics Canada. The Secretary of State sponsored the survey from which this data was extracted.

[2] For example, Statistics Canada's publications on public libraries (Cat. No. 81-205) or on university and college libraries (Cat. No. 81-206) or even the Service Bulletins dealing with the publishing of books (Cat. No. 81-001, vol. 4, No. 5; Cat. No. 81-001, vol. 5, No. 6; Cat. No. 81-001, vol. 5, No. 8) or public libraries (Cat. No. 81-001, vol. 5, No. 4).

[3] This survey was conducted as a supplement to the monthly labo force survey.

TABLE I.

	Minutes per day that the total population spent reading (1)	Percentage of the population who said they read regularly (2)	Minutes per day that "readers" spent reading (3)
Newfoundland	33	47	69
Prince Edward Island	38	55	70
Nova Scotia	35	55	64
New Brunswick	30	47	64
Quebec	26	44	59
Ontario	38	58	65
Manitoba	34	59	58
Saskatchewan	31	54	58
Alberta	39	60	65
British Columbia	49	68	73
Canada	35	54	64

drops to 26 per cent when only "readers" are considered.

The following conclusion can be drawn from this analysis: people read far more *on average* in some provinces than in others, not so much because "readers" read more in one province than in another but rather because certain provinces contain more "readers". In other words, "readers" in British Columbia do not read much more than their counterparts in Quebec, but proportionately speaking, there are more of them[4].

We know also, from the annual reports submitted by public libraries, that the average number of books per capita borrowed from these libraries varies significantly from one province to another. We thought it might be interesting to compare the provincial public libraries' figures for 1975 with the figures given in column 1 of Table I, and have done so in Table II (p. 154).

It should be noted that the number of books was distributed over the *whole* population, whereas the survey on reading time covered only people aged 14 years and over. However, we still observed quite a significant correlation – approximately 0.79 – between the two sets of figures. This means that the reading habits reported in our survey are largely corroborated by the statistics from the public libraries.

There are therefore appreciable differences, from province to province, in the time Canadians aged 14 years and over devote to reading *for leisure*. Are similar differences related to factors other than geography? To answer this question we shall consider

---

[4] If this phenomenon is analysed mathematically, it can be shown that group-to-group variations in the time devoted to reading are due more to differences in the percentage of "readers" in each group than to the length of time such "readers" devote to reading.

If the actual time "readers" devote to reading is denoted by t, the time for the whole group aged 14 years and over by T and the proportion of the group who actually read by p, we have the following formula: $T = pt$

We know, moreover, that $\Delta T = t\Delta p + p\Delta t + \Delta p\Delta t$ (a) where $\Delta T, \Delta p$ and Δt are differences between groups in the T and t times and the proportion p. Thus, for example, if the British Columbia group were compared with the group representing the whole country, we know from Table I that t, p and T for Canada will be respectively 61, .56 and 34.16, whereas they will be 69, .70 and 48.3 for British Columbia; hence Δt, Δp and ΔT will be respectively equal to 8, .14 and 14.14. If we use these data to calculate ΔT by formula (a), we obtain:

$$\begin{aligned} \Delta T &= 61 \times .14 + .56 \times 8 + .14 \times 8 \\ &= 8.54 + 4.48 + 1.12 \\ &= 14.14 \end{aligned}$$

In this formula the first term $t\Delta p$ indicates the part of the change ΔT due to the change Δp; the second, namely $p\Delta t$ the part due to the change Δt and the third, $\Delta p\Delta t$, the part due to interaction between Δp and Δt. Regardless of the group being compared to Canada as a whole, the first term is always greater than the sum of the other two. In other words, variations observed for any given group are explained *primarily* by variations in Δp, that is, by the difference between the proportion of people in the group who really read and the same proportion for the whole country. The same constancy is noted when any two subgroups are compared.

TABLE II.

	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alb.	B.C.	Canada
No of books borrowed per capita	3.48	3.86	3.73	3.23	1.94	6.46	4.04	5.49	4.81	7.10	4.74
No of minutes per day spent reading	33	38	35	30	26	38	34	31	39	49	35

the following four variables: age, mother tongue, sex, and type of occupation.

We shall consider initially whether the time spent reading varies between age groups. Column 1 in Table III indicates that it does. Young people between 14 and 24 years of age spend 33 per cent more time reading than do persons in the age group 45-64.

Here also, variations of the groups' averages may be due to differences in the number of people who read regularly or in the actual time they devote to reading.

Column 2 of Table III shows that at present more young people read. Our survey obviously does not allow us to state that people read less as they grow older. To draw such a conclusion, we should have calculated forty years ago the percentage of young people who read regularly and compared it today with the corresponding percentage for the same people, who would now be 65 years of age. The only figures we actually have refer to the latter group. However, our survey does show that today the older the group, the lower its percentage of readers. The relationship between age and percentage of readers is almost linear.

An examination of this relationship shows that in the case of the first three groups at least, differences in the average time a group spends reading are largely determined by the number of "readers" in the particular group. As regards actual reading time, the results for "readers" in each group are found to be quite similar: 65, 62 and 63 minutes per day respectively. The situation is not quite the same in the case of older "readers" (65 years and over) who spend about 14 per cent more time reading than the other age groups.

We can summarize, therefore, by saying that the average time spent reading fluctuates from one age group to another. However, these variations are due more to differences in the number of "readers" in each group than to the actual time that the "readers" in each group spend reading. Young people who read regularly do not spend much more time at this activity than older people, but they represent a higher proportion of their group. Nevertheless, it should be pointed out that thirty per cent of the young people surveyed show no interest in reading *for leisure*.

The second variable we shall examine is the respondent's mother tongue. Here, we have grouped respondents into three mother-tongue categories – English, French and Other. The third category has not been subdivided further: because of the small number of representatives from each sub-category in our sample, the results would have no real significance. Column 3 in Table IV clearly shows that there is a pronounced difference between cate-

TABLE III.

Age groups	Minutes per day that the total population spent reading (1)	Percentage of the population who said they read regularly (2)	Minutes per day that "readers" spent reading (3)
14 - 24 years	40	62	65
25 - 44 years	35	56	62
45 - 64 years	30	47	63
65 years and over	31	43	72

TABLE IV.

	Minutes per day that the total population spent reading			Percentage of the population who said they read regularly			Minutes per day that "readers" spent reading		
	M (1)	F (2)	T (3)	M (4)	F (5)	T (6)	M (7)	F (8)	T (9)
	Min.	Min.	Min.	%	%	%	Min.	Min.	Min
Maternal tongue: English	32	51	42	54	71	63	60	72	67

TOTAL	27	43	35	47	62	54	57	69	64

gories. The average for the Anglophone population is 83 per cent higher than for Francophones and 50 per cent higher than for the Other category. Here also, we considered whether these disparities were due essentially to differences in the number of readers in each category or rather to variations in the amount of time that the readers in each category devoted to reading. Columns 6 and 9 in Table IV should clarify this point. A comparison of the three categories shows that the number of Anglophone Canadians who read regularly is 58 per cent higher than the corresponding number of Francophones and 31 per cent higher than the number of "readers" in the Other category. However, Anglophone "readers" spend on average 15 per cent more time per day in reading than do "readers" in the other two categories. We find therefore that both factors – the number of readers and the time actually spent reading – come into play. Here also, the first factor is of greater significance. In short, while it is true that Anglophone "readers" do read a little more than "readers" in the other two categories, there are also far more Anglophones who are "readers".

Table IV also contains information on the third variable – sex. As the last line of the Table indicates, on average Canadian women devote 59 per cent more time to reading than men do. The difference is even more pronounced in the case of the Francophone category, where women spend 88 per cent more time in reading than men do.

Overall, we find that female "readers" outnumber male "readers" by 32 per cent and devote 21 per cent more time to reading each day than their male counterparts. We can say, therefore, that in general there are more female "readers" than male, and that women who read regularly do significantly more reading than men "readers".

Age, sex and mother tongue are some of the variables influencing Canadian reading habits. It is safe to say that reading habits also vary according to the person's occupation. To appreciate this, we have only to examine Table V (p. 156) containing the three basic columns used in the previous tables. As expected, there is a clear difference between blue-collar workers and professionals as regards the average time each group spends in reading *for leisure.* On average, professionals read three times more than labourers and blue-collar workers. However, differences are again found to be largely due to the percentage of people in each group who read regularly. In other words, labourers and blue-collar workers who read regularly do not spend much less time doing so than professionals or students. However, as fewer labourers and blue-collar workers read, the average reading time for this group is quite short.

Generally, there is no great difference between "readers" from the various groups examined, be they male or female, young or old, Anglophone or Francophone, blue-collar workers or professional. Differences do exist of course, but they are far less pronounced than the figures by group might indicate[5]. In short, Canadian "readers", regardless of how they are classified, say that they read on average for approximately one hour each day. However, the number of "readers" in each group varies significantly.

Having briefly examined the time which Canadians devote to reading *for leisure,* we can consider whether "readers" or "non-readers" spend more time reading newspapers, listening to the radio, looking at television or going to the theatre.

---

[5] The mathematical equation presented in Footnote 4 could also apply to the other factors.

TABLE V.

	Minutes per day that the total population spent reading Y	Percentage of the population who says it reads X	Minutes per day that "readers" spent reading
Professional and technical	54	78	69
Students	46	70	66
Managerial	39	68	58
White-collar and service	38	58	65
Housewives	36	54	66
Unemployed	33	51	65
Retired	29	39	73
Blue collar workers	19	37	51
Labourers	17	33	52

TABLE VI.

	Say they read no books 46%		Say they read books for less than one hour each day 38%		Say they read books for more than one hour each day 16%	
	Percentage of the group who participated in the specified activity	Minutes spent on the activity by all persons comprising the group	Percentage of the group who participated in the specified activity	Minutes spent on the activity by all persons comprising the group	Percentage of the group who participated in the specified activity	Minutes spent on the activity by all persons comprising the group
Watching television	95	102	97	86	96	121
Listening to the radio	77	62	89	59	89	98
Listening to records and tapes	49	28	76	35	75	63
Reading newspapers	62	27	87	30	85	64
Reading magazines	32	10	80	21	78	54
Playing a musical instrument	6	3	16	6	17	13
Painting, sculpturing or drawing	5	2	18	6	20	11
Handicrafts	7	5	19	9	25	21
Hobbies	22	20	41	24	44	45
Taking courses	7	1	15	3	17	6

To answer this question, we divided Canadians into three groups – "non-readers", persons who read for less than one hour each day and persons who read for more than one hour each day. These three groups represent respectively 46, 38 and 16 per cent of the population. We then examined the percentage of people in each group who participated in a number of other leisure activities, and subsequently calculated how many minutes on the average all persons comprising each group devoted to each leisure activity. The results are given in Table VI. They show that the respondents who read a lot also devote more time to watching television, listening to the radio or records and participating in other leisure activities. Those who read a little less – but can still be considered as "readers" – come half way between those who read most avidly and the "non-readers" for every activity except watching television and listening to the radio. If we add up the number of minutes which each group reportedly spent on the activities listed in Table VI, we find that generally those who read for more than one hour each day also spent 90 per cent more time practising the other leisure activities than those who did not read. Likewise, those who read for less than one hour each day spent 7 per cent more time practising the other leisure activities than did "non-readers".

The total number of minutes spent on leisure activities may appear very high, particularly in the case of the most avid "readers". We should point out that, although we asked respondents not to count their time twice if two activities were engaged in simultaneously (for example, listening to music while reading), unfortunately some may have done so. Many people listen to the radio or records or even watch television while reading or engaging in certain other activities. Instead of recording this as time spent on one activity, some people may have recorded it twice on the questionnaire, with the result that the total time spent on leisure activities is probably overstated. Valid comparisons can still be made between groups, but the exact amount of time spent on leisure activities cannot be determined from the survey.

Furthermore, it should perhaps be pointed out that the group recording the highest reading time includes quite a large number of senior citizens, who have more free time than other members of society, and thus the opportunity to spend more time on all types of leisure activity.

It appears that our conclusions regarding everyday cultural activities may even be applicable to others slightly less frequently pursued. Table VII which was compiled in the same way as Table VI,

TABLE VII.

	Say they read no books 46%		Say they read books for less than one hour each day 38%		Say they read books for more than one hour each day 16%	
	Percentage of the group who participated in the specified activity (1)	Number of times per month (2)	Percentage of the group who participated in the specified activity (3)	Number of times per month (4)	Percentage of the group who participated in the specified activity (5)	Number of times per month (6)
Art galleries or museums	8	.12	22	.36	29	.52
Science museums	5	.07	16	.19	19	.26
Other museums	10	.15	25	.34	29	.44
Historical monuments or sites	15	.26	36	.64	39	.81
Zoos, wildlife reserves and so on	21	.38	41	.75	44	.90
Libraries	6	.16	37	.98	51	1.78
Motion picture theatres	40	1.04	64	1.67	64	1.82
Film clubs	3	.08	8	.16	10	.20
Pop concerts or recitals	10	.21	20	.42	21	.47
Classical music concerts	2	.04	8	.13	11	.20
Theatrical performances	4	.06	12	.20	14	.25
Exhibitions, fairs or arts and crafts festivals	10	.15	20	.32	23	.39

shows that the most avid "readers" also go most often to plays, movies and concerts, even of popular music. The group which, proportionately speaking, visits a museum or attends a performance most frequently, is invariably and without exception the group which reads the most. We have only to look at columns 1, 3, and 5 of Table VII to appreciate this fact. Conversely, "non-readers" spend the least time on other leisure activities. The group which reads less than one hour each day comes halfway between the other two. The same conclusions are drawn from an examination of columns (2), (4) and (6), which show how many times per month, on average, persons in each of the three groups visited a cultural institution or attended a performance.

It seems, therefore, that there is a direct correlation between Canadians' tendency to read *for leisure* and their interest in what might be termed other cultural activities. While we should be wary of drawing any hasty conclusions regarding cause and effect, there is justification for noting an obvious correlation.

We should like to conclude by making two observations which can be considered at least as a working hypothesis: (1) if a group's average reading time is to be lengthened, the number of "readers" – rather than the time each individual "reader" devotes to reading – must be increased; (2) genuine interest in one cultural activity strongly suggests a real or quickly acquired interest in another. Through further analysis of the survey results, these observations will be verified for their validity and formulated more accuratly; also, relevant conclusions might be drawn regarding the development and democratization of Canadian culture.[6]

Further studies will be necessary. We have analysed here only the time devoted to reading. As the reader of this article has no doubt noticed, no mention has been made of such questions as the type or source of books Canadians read, prefer or keep in their personal library. Such studies should be possible in a few years through the cultural statistics program which Statistics Canada is trying to develop[7]. Another survey,[8] which was conducted in the fall of 1976, is currently being analysed, and will allow us to compare reading not only with other cultural activities but also with sporting and outdoor activities. This survey will throw far more light on the leisure habits of the Canadian people.

---

[6] The Secretary of State has published a more detailed analysis of all the results of the survey under the title *A Leisure Study 1975*, edited by R.E. Schliewen. It is available from the Arts and Culture Branch, Research and Statistics Directorate, Secretary of State.

[7] Further information on the cultural statistics program can be obtained by writing to the author of this article at Statistics Canada.

[8] The survey, which was conducted in October 1976, dealt primaril with sporting and physical fitness activities, but some of the questions on cultural activities that had been used in the October 1975 survey were repeated.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average per-cent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
V. Berlinguette – Assistant Chief Statistician, Business Statistics Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 5 – Prices

The construction statistics presented in Table 3 (Other Price Indexes) will now be presented in Table 5 (Construction Price Indexes), a new table being introduced with this issue.

The following series will replace the construction statistics previously presented in Table 3:

Thirty industrial materials	D 611017
Thermal coal – Total	D 477020
Construction machinery and equipment:	
Composite index	D 603800
Canadian made	D 603813
Imported	D 603829
Forestry machinery and equipment, East of the Rockies, composite index	D 477000

Section 13, Table 9 – Stock Exchange Statistics

The series "Brokers Loans" (Montreal Stock Exchange) has been deleted with this issue. The series is no longer available from the source.

Capacity Utilization Rates in Canadian Manufacturing

Peter Koumanakos*

From the point of view of utilization of resources available for the production of goods, there is a significant similarity between the labour force and the stock of capital in place. Any degree of under-utilization in either type of resource indicates the gap between potential and actual use of these resources. However, when the socio-political implications of unemployed resources are considered, then the difference between capital stocks and labour becomes substantial.

It is common knowledge that the stock of capital in place typically is not used with the same degree of intensity over the year. Recently, increasing attention has been focused on the measurement of productive potential and the extent to which it is realized. This capacity utilization measurement is an interesting way of examining the relationship between the total resources available and the level of potential output. Within this context, utilization measures could establish significant yardsticks indicative of trends and cycles in capacity utilization.

Economists, particularly in the United States, in their efforts to measure capacity have developed a number of alternative methods varying from direct annual surveys to econometric models.

At present in Canada, the Department of Industry, Trade and Commerce produces an index of capacity utilization for the goods-producing industries by using the Wharton School trend-through-peak estimation procedures[1]. This index is derived from seasonally adjusted quarterly indexes of industrial production, which are charted and the peaks selected by inspection. These peaks are considered to be the capacity output of the industry. Successive capacity peaks are joined by a straight line to indicate the capacity during the intervening periods. Forward extrapolation of the same straight line generates capacity measures for periods following the last peak until the actual production index intersects the line.

The Statistics Canada approach represents an alternative measure and is based on the capital-output ratio of each industry.[2] It provides a basis for establishing the capacity output series with which actual output data are compared in order to derive the utilization rates. The definition of capacity in this procedure is the maximum output obtainable under normal technological and market conditions.

Some differences in level exist between the Statistics Canada series and those of the Department of Industry, Trade and Commerce. This situation is to be expected, of course, given the different estimation procedures underlying each set of measures.

Table 1 (pp. 146-151) shows quarterly indexes of capacity utilization in Canadian manufacturing broken down into various major groups according to the 1970 Standard Industrial Classification for the period back to 1961. These indexes are now available in CANSIM, Matrix number 3539.

The methodology used to produce these indexes is based on a comparison of the *actual* output of an industry during a certain time period with the estimated *capacity* output during that period[3].

---

* Peter Koumanakos is Acting Assistant Director, Construction Division, Statistics Canada.

[1] These indexes are published in *Rate of Capacity Utilization, Canada*. Department of Industry, Trade and Commerce, Ottawa. The Bank of Canada in an article which appeared in the *Bank of Canada Review*, September 1974, published a series of capacity utilization measures using a methodology broadly similar to that used by Statistics Canada. See footnote on page 4 in the aforementioned article.

[2] The indexes are published in *Capacity Utilization Rates in Canadian Manufacturing*, Catalogue 31-003, quarterly, Statistics Canada.

[3] The concepts of capacity used follows the work of Daniel Creamer, "Capital Expansion and Capacity in Post-War Manufacturing", *Studies in Business Economics*, Number 72, National Industrial Conference Board, New York, 1961.

The estimated capacity output is based on a capacity capital-output ratio derived from the industry's gross stock of fixed capital, measured in 1971 dollars. These capital stock estimates are produced by the National Wealth and Capital Stock Section of Statistics Canada, and a brief outline of the method used to derive the estimates follows[4].

The measurement procedure underlying the capital stock estimates is known as the "perpetual inventory" method. Briefly, this method involves the accumulation, over a period of years, of investment expenditures by industry to obtain its capital stock in any given year. The basic ingredients required are:

i) annual investment series in current dollars, by industry and category of expenditure;
ii) price deflators relating to the investment series; and
iii) estimates of the average economic life of the assets used in the various industries.

To illustrate the mechanics of the "perpetual inventory" method, an example of the actual computing process is given. (Table 2, p. 152, summarizes the computational procedure involved in this example). Assume that the capital assets in a particular industry remain in production for ten years before they are retired. We start with year one and, adjusting for prices, we accumulate the investment expenditures pertaining to the types of capital assets in question for a period of ten years. In the tenth year, a measure of the gross stock of this industry's capital assets is obtained. In the eleventh year, we deduct from the accumulated total the investment expenditures of the first year and add the purchase of capital assets of the eleventh year. We proceed in the same manner for all subsequent years.

In the *gross capital stocks,* capital assets are included at their full value during the entire time they remain in the capital stock. In other words, the deductions from gross investment are due to the fact that assets in question have ceased to exist. An alternative set of measures of capital stocks is derived by adjusting the value of the assets in existence for the wear and tear and obsolescence they undergo during their service life; these estimates are known as *net capital stocks.* Calculations of net capital stocks are made by applying a depreciation formula to the gross stock estimated. The net stock is always equal to the difference between the cumulative value of past gross investment and cumulative depreciation.

The quarterly capital estimates are derived by linear interpolation of the *annual gross capital stocks.* These stock estimates are then combined with the seasonally adjusted quarterly indexes of industrial production to derive quarterly capital-output ratios for the whole period[5].

The minimum capital-output ratio during this period indicates the historical capacity peak. When we divide the capital stock series by the minimum capital-output ratio, we obtain a series of potential output. The annual capacity rates are obtained by applying the same technique to annual series on production and capital stocks.

As the final step in this procedure, actual data for individual production indexes are expressed as a ratio of the potential output series in percentage form to obtain the indexes of capacity utilization.

We summarize the procedure of measuring the capacity and operating rates in the following fashion:

Let K_t = gross fixed capital stocks at time t,

let $\frac{K_o}{P_o}$ = capacity capital–output ratio

where K_o = fixed capital in benchmark period[6]

and P_o = capacity output in the same period,

let P_t = actual output at t,

and CP_t = estimated capacity output at time t.

Then $K_t \div \frac{K_o}{P_o} = CP_t$.

$\frac{P_t}{CP_t} \times 100$ = percentage of capacity utilized at time t; that is, the capacity utilization rate.

Of course, in subsequent periods, when a lower capital-output ratio occurs, it is adopted as the capacity ratio.

This formula was used to calculate the manufacturing industry capacity utilization rates shown in Table 1 (p. 146-151). The indexes for total manufacturing were derived by aggregation, using the same weights as the 1971 Gross Domestic Product Index[7].

---

[4] Capital stock estimates are published in *Fixed Capital Flows and Stocks,* Catalogue 13-211, annual, Statistics Canada.

[5] The indexes of industrial production used are those published in *Indexes of Real Domestic Product by Industry,* Catalogue 61-005, monthly and annual supplement, Statistics Canada.

[6] As noted previously, this benchmark period is the time when the minimum capital-output ratio occurred.

[7] For the period prior to 1971 the data are not available on a 1971 base. To obtain a continuous record on a 1971 base, the indexes on a 1961 base were mechanically rebased to 1971 by multiplying by 100.0 and dividing by the 1971 index value on a 1961 base.

(continued page 146)

Observations

New Guidebook Published for Smaller Manufacturers

A free 45-page guide to manufacturers on how to use statistics to improve their business has been published by Statistics Canada.

Entitled *How A Manufacturer Can Profit From Facts*, it shows how statistics can be used in marketing, learning about the competition, locating a plant, comparing costs with those of other firms, keeping track of employment trends, monitoring various levels of price changes and using an escalation clause in a contract.

Five case studies are included, as well as sections on finding statistics, understanding the jargon and using statistics.

This first guide of a new series was prepared by User Advisory Services, a Statistics Canada Division with offices across Canada that assist businesses by providing an inquiry and reference service and access to published and unpublished information.

Large companies with resident economic and research staff are aware of the kinds of information published by Statistics Canada and how it can be used. This booklet is intended primarily for smaller manufacturers who are not aware of the wealth of information available and have little or no training in the uses of statistics.

A free copy of the guide is available from User Advisory Services, Statistics Canada, Ottawa, K1A 0T6, or from the division's eight regional offices.

For further information regarding this guide, contact Mr. Ellis Drover, Director, User Advisory Services, (613) 996-5841.

Private and Public Investment in Canada: Outlook 1977

This report sets out the 1977 capital spending intentions for all sectors of the economy. Comparative figures of preliminary actual expenditures in 1976 and actual expenditures in 1975 are also given. The results are based on a questionnaire survey of individual companies and other spending agencies completed towards the end of 1976 and in January and February 1977. The figures reflect spending plans as formulated at that time.

The estimates cover total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian business, institutions and governments, together with expenditures for housing. All in all, about 24,000 establishments were surveyed for their investment intentions. In order to approximate full coverage, adjustments were made for non-surveyed and for non-reporting firms. In a few areas, where the survey approach is not considered practical, expenditure estimates were arrived at independently on the basis of current trends and expert opinion in these fields (e.g., agriculture and housing).

Information on capital spending intentions provides a useful indication of market conditions both in the economy at large and in particular industries. Since such expenditures account for a large and relatively variable proportion of gross national expenditures, the size and content of the investment program provides signifcant information about demands to be placed upon the productive capacities of the economy during the period covered by the survey. In addition, information on the relative size of the capital expenditures program planned, both in total and for individual industries, gives an indication of the views management hold on prospective market demands in relation to present productive capacity.

Non-capitalized repair expenditures on structures and machinery and equipment are also given in the report, but these are shown separately. By including these outlays, a more complete picture is provided of all demands likely to be made on labour and materials in accomplishing the program.

Private and Public Investment in Canada: Outlook 1977 (Catalogue 61-205) is available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: $1.05

Further information about this report can be obtained from M. Duncan Lusick, Capital Expenditures Section, Construction Division, Statistics Canada, Ottawa K1A 0T6, (613-994-9546).

Market Research Handbook

The basic purpose of the *Market Research Handbook* is to provide a convenient source of information and reference for all those who are engaged in analysing the many aspects of Canadian markets on the local, provincial, regional and national level.

The *Market Research Handbook* is now published annually, and the 1976 edition represents the second consecutive year of its release. Many of the tables which appeared in last year's issue have been updated to reflect more current information, and some of the tables presented in the *1975 Market Research Handbook* have been eliminated from this year's Handbook, in order to allow for the addition of many new tables which contain information of increasing relevance to the business community.

In order to meet the basic purpose of the Handbook as outlined above, the emphasis was again placed on bringing together a wide variety of data which collectively would provide the user with basic information requirements for sound decision-making. Obviously, the data contained in the Handbook will not solve specific marketing problems; rather it should serve as one of a growing number of tools used by those engaged in the decision-making process.

One hundred and eighty tables set out in great detail information on industrial output, imports and exports, price indexes, merchandising and services, population characteristics, personal income and expenditure, housing, vehicle ownership, household facilities and equipment and detailed statistical information for metropolitan areas and census agglomerations.

A feature still apparent in this addition of the *Market Research Handbook* is the extensive manipulation of the primary data in order to show growth rates, and share of market. These data should help the marketing practitioner in assessing the dynamic aspects of marketing topics such as population growth, shopping centres development, income distribution and changes in consumer consumption patterns.

A number of suggestions were made regarding the contents and the presentation of the material contained in the previous edition of the Handbook. Many of these suggestions were implemented in this edition of the Handbook.

The publication is divided into eight sections, rather than the six sections in the 1975 edition. The first seven sections contain tabular data. Sections 1-5 present national and, in many cases regional and provincial statistics on specific areas of interest to the marketer. Section 6 describes the metropolitan area markets. Section 7 is a new section and contains statistical information on census agglomerations. In order to facilitate the readers' use of Section 6 and 7, a chart has been included in each of these sections, which lists the data available for each metropolitan area of census agglomeration included in the Handbook.

The statistical tables in Sections 1-7 of the Handbook are supported by three types of annotations which are found in Section 8 of the *1976 Market Research Handbook*. In the previous edition, these annotations appeared at the end of each respective section.

a) Sources of information: This sub-section lists the publications from which the primary data for each table were derived. The source sub-section will be useful to those readers who may wish to obtain additional data on a specific subject.

b) Notes: It is recommended that the user refer to these notes in conjunction with the tabular material in order to avoid drawing erroneous conclusions and to obtain an appreciation of the possible limitations inherent in the data.

c) Definitions of terms: In order to assist the user in the analysis of data contained in the Handbook, a listing of the more important terms employed throughout the Handbook are presented in alphabetical order in both english and french. Again, it is recommended that the reader refer to these definitions in conjunction with the statistical tables. Because of the precise nature of many terms, the user is urged to refer to both the "Notes" and "Definitions" sub-sections when using the data contained in the Handbook.

The 1976 edition of *Market Research Handbook* (Catalogue 63-224) is available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: Canada – $7.50; other countries – $9.00

Further information about this report can be obtained from Mr. D. Van Luven (613-996-9295), Distributional Analysis Section, Merchandising and Services Division, Statistics Canada, Ottawa K1A 0T6.

Cancer Mortality by Site

Cancer can originate in any one of many parts of the body, and is classified medically according to its place of origin or "site". Recent trends in cancer mortality have been widely divergent; for example, there has been a sharp rise in lung cancer mortality among males and a marked decline in stomach cancer mortality for both sexes.

The report *Cancer Mortality by Site, 1950-1963* examined these trends and *Cancer Mortality by Site, 1960-1973* may be considered a sequel to the above report. It contains descriptive and statistical analyses of Canadian cancer mortality rates by site, sex and province for the years 1960-1973. National trends by site, sex and five year age group are also covered for the same period. Finally, cancer mortality in Canada by site and sex is compared with the corresponding mortality in a group of selected countries for the year 1971.

Both reports are based on a selection of 23 sites, which account for approximately 95% of all Canadian cancer mortality. The sites are dealt with in the order in which their classification numbers appear in *The International Statistical Classification of Diseases, Injuries and Causes of Death, Seventh Revision, 1955.* From 1969, the *Eighth Revision of the International Classification of Diseases* as adapted for use in the United States (ICDA) has been used by the Vital Statistics and Disease Registries Section.

The time series of death rates were tested for significant trends, and the results of these tests are shown in the Appendix. The mortality data on which the report is based were collected through the death registration system under a co-operative arrangement with the provincial vital statistics officials.

It is hoped to supplement this present report, in the fairly near future, with a study of Canadian cancer mortality by local areas covering the periods 1960-1962, 1965-1967 and 1970-1972. This study will also include urban-rural comparisons.

Cancer Mortality by Site, 1960-1973 (Catalogue 84-534) is available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: $5.25

Further information can be obtained from Dr. J. S. Cudmore, Vital Statistics and Disease Registries Section, Health Division, Statistics Canada, Ottawa K1A 0T6, (613-995-0864).

Social Security

Statistics Canada recently published the first issue of an annual series on social security programs. This report displays statistics in time series from 1946 to 1975 and relates them to various demographic and socio economic variables such as population, Gross National Product, labour force, personal income, average wages and salaries.

Social Security (National Programs) 1976 contains 797 pages and is divided into three major chapters: Chapter 1 describes the major programs for Canada as a whole; the major programs for the regions and the provinces are presented in Chapter 2; other programs are described in Chapter 3.

The report deals with social security programs that are administered or funded by the federal government either wholly or jointly with the provinces under cost-sharing arrangements. One exception, the Quebec Pension Plan, has been included since it and the Canada Pension Plan, together provide a national social insurance program. The following is a list of programs for which statistics are provided:

a) Health Insurance
    Medical Care Insurance
    Hospital Insurance
b) Social Insurance
    Unemployment Insurance
    Canada and Quebec Pension Plans
c) Demogrants and Supplement
    Family Allowances
    Old Age Security
    Guaranteed Income Supplement
d) Social Allowances and Services
    Old Age Pensions
    Old Age Assistance
    Allowances for Blind Persons
    Allowances for Disabled Persons
    Vocational Rehabilitation of Disabled Persons
    Unemployment Assistance
    Canada Assistance Plan
e) Other Programs
    Veterans Disability Pensions
    Civilian Disability Pensions
    War Veterans Allowances
    Civilian War Allowances
    Indian Social Welfare
    New Horizons
    Family Planning
    National Welfare Grants

Information presented on each program includes, among others, a review of its historical development, cost-sharing criteria and/or formula, provincial funding, administration, numerous statistical tables and charts, and a bibliography of related government publications.

The report will interest not only the researchers, administrators and government policy-makers, but also the concerned public. Users suggestions are welcomed and will be considered for future issues.

Social Security (National Programs) 1976 (Catalogue 86-201) was prepared by the Social Security Unit of the Institutional and Public Finance Statistics Branch. It can be obtained from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6. Price: Canada – $8.25; other countries – $9.90.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force

---

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U.I. benefit, prior to July 1975 included with regular benefit

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelte and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources:** **Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Radio phonograph combinations. [4] Includes monaural and stereo with and without amplifiers. [5] Excludes producers' shipments for export. [6] Included with "total television receivers". [7] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc

[2] Includes crude oil, condensate and pentanes plus.

[3] Gross new production by field less field flared and waste

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

Table 5: Statistics of refined petroleum products[1] (thousand barrels)

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. A reported by principal manufacturers. Total production is somewhat higher.

[5] Building contractors, public and utility construction and structural steel fabricators

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1]The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2]The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties.

Note: Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form.

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

Source: Trade of Canada, Exports (65-004), Statistics Canada.

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. [3] Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines

The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Co-umbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with he statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Observations (continued from page 10)

Inquiries about the contents of this publication may be directed to Mr. H. Mimoto, Chief, Social Security Unit, Institutional and Public Finance Statistics Branch, Statistics Canada, Ottawa, K1A 0T6, (613-995-0871).

Statistics Canada Organizational Changes

The Household Statistics Branch, formerly part of the Household and Institutional Statistics Field, has been combined with the Census Field organization which is now called Census and Household Surveys Field headed by Mr. R. A. Wallace, Assistant Chief Statistician.

The Agriculture Division and the Census of Agriculture Division, which were part of the Business Statistics Field and the Census Field respectively were combined with the Institutional and Public Finance Statistics Branch to constitute the new Institutions and Agriculture Statistics Field headed by Mr. L. E. Rowebottom, Assistant Chief Statistician. In addition an Office of Co-ordination of Administrative Data Access has been created and will also report to Mr. L. E. Rowebottom.

Senior Staff Changes at Statistics Canada

Appointments

Mr. Y. Fortin, Director, Education, Science and Culture Division, has been appointed Director of Standards Division.

Mr. C. J. Page has recently been appointed Director of Statistics Canada's Edmonton Regional Office. He was formerly Assistant Director in the Winnipeg Regional Office.

Departure

Frank W. Emmerson, Coordinator, Financial Statistics, Economic Accounts and Integration Field, recently retired after 32 years of service with Statistics Canada.

Mr. Emmerson, a graduate of the University of Saskatchewan and of the University of Chicago was a member of a small team which pioneered National Accounting in Canada. He was responsible for the development of corporation profits and related series in the original set of National Accounts as well as for the historical estimates going back to 1926. He set up the first quarterly survey in the area of financial statistics in the early 50's. Subsequently he developed the survey to encompass other elements of the Financial Statements such as assets and liabilities, source and application of funds etc. Mr. Emmerson was also heavily involved in the production of the first Input-Output table in Canada. The development of a system of quarterly estimates on Financial Flows by Frank Emmerson had been preceded by his monumental efforts in data development which were released as part of the study entitled *Financing of Economic Activity in Canada* by William C. Hood, prepared in 1958 as part of the Royal Commission on Canada's Economic Prospects.

Mr. Emmerson has contributed several papers to international journals and has participated in the work of the Organization for Economic Co-operation and Development (O.E.C.D.) as well as completed a United Nations assignment in Iran as an advisor and lecturer to the Central Bank. Finally, Mr. Emmerson has played an active role for numerous years as a member of the *Canadian Statistical Review* Editorial Board.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
V. Berlinguette – Assistant Chief Statistician, Business Statistics Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
G. Bériault-Prud'homme – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 3, Table 1 – Income and Expenditure Accounts

Quarterly and annual data for the national income and expenditure accounts have been revised for the year 1973-1976 inclusively. For further information see *National Income and Expenditure Accounts, first quarter 1977* (catalogue 13-001).

Section 6, Table 17 – Radio and television receiving sets

The series "Record players" (D 2410) has been deleted with this issue. The series is no longer available from the source.

National Income and Expenditure Accounts
First Quarter 1977 – Advance Information*

Gross National Product, seasonally adjusted at annual rates, increased 2.2 per cent in the first quarter to a level of $199.9 billion. Measured in real terms, GNP increased 1.3 per cent after having fallen 0.2 per cent in the last quarter of 1976. The economy swung back to a relatively healthy but narrowly based rate of real growth in the first quarter, largely on the strength of a substantial increase in the value of exports and a consequent improvement in the balance of trade in goods and services. An increase in the real value of government current expenditure also contributed a significant amount to the expansion in real output. But personal expenditure on goods and services, which accounted for almost all of last year's real growth, declined 0.4 per cent in real terms as spending on both semi- and non-durable goods fell, and there was little strength in gross fixed capital formation.

Prices

Despite increases in the implicit price indexes for a number of major expenditure aggregates, the price of national production as measured by the overall GNP implicit price index rose only 0.8 per cent in the first quarter. This was primarily because the implicit price index for government current expenditure fell 2.4 per cent after increasing 6.4 per cent last quarter, when large retroactive wage payments were made. Removing these payments gives a better measure of the "underlying" rate of price change in the economy, and on this basis, the government and GNP implicit price indexes increased during the quarter by 1.9 per cent and 1.7 per cent respectively.

The improvement in the foreign sector balance coincided with a decline in the value of the Canadian dollar against most major foreign currencies, and this movement was equivalent to about half of the very large 6.5 per cent increase in the implicit price index for imports. Higher import prices were in turn partially responsible for an acceleration in the price index for personal expenditure, which increased 2.0 per cent after a 1.1 per cent increase in the fourth quarter of 1976. The exchange rate movement also contributed to the 3.2 per cent increase in the export implicit price index. A large proportion of Canada's exports is priced in U.S. dollars, presumably in part because the prices are set by world markets and not by the Canadian exporter. A rise in the price of U.S. currency in terms of Canadian therefore has the effect of raising the Canadian dollar price of these exports, even though the price to foreign customers has not changed.

The increases in the volume and price level of exports both apparently helped to improve the performance of corporation profits before taxes, which increased 15.6 per cent and accounted for about two-thirds of the growth in output measured in income terms. The largest percentage increases were in manufacturing and mining – industries that produce commodities experiencing strong export growth in the first quarter – and in wholesale and retail trade. The first quarter increase followed a very weak year in 1976, and the growth in profits from one year ago was only slightly stronger than that in GNP as a whole.

About half of the first quarter change in profits resulted from windfall gains made by selling goods from inventory at prices higher than those that prevailed when they were produced. The inventory valuation adjustment, which measures these profits, increased in absolute magnitude by $1.6 billion from the fourth to the first quarter, most of which can be attributed to the corporate sector. The largest changes in inventory profits were in manufacturing and retail trade.

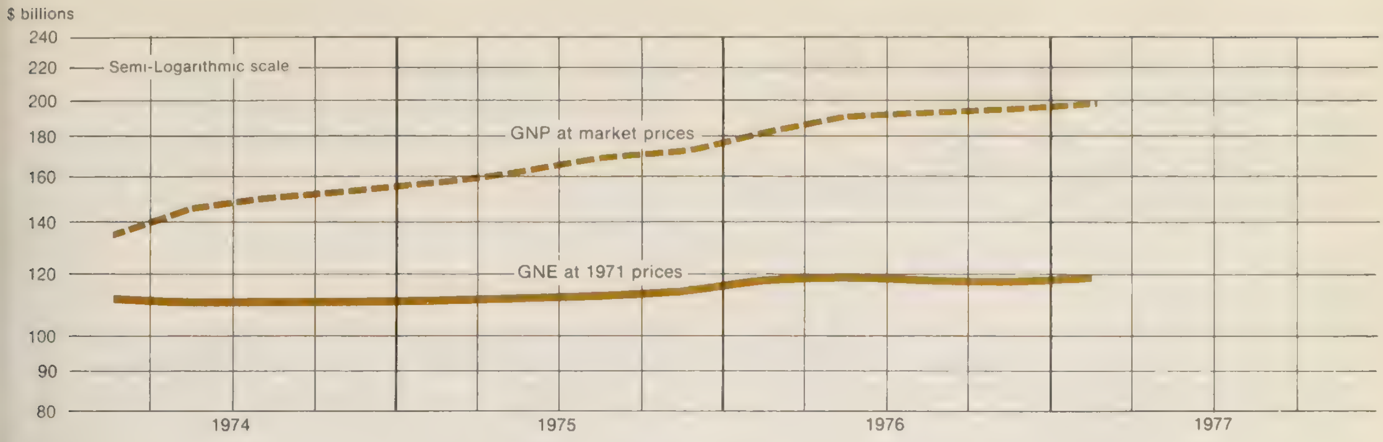
Incomes

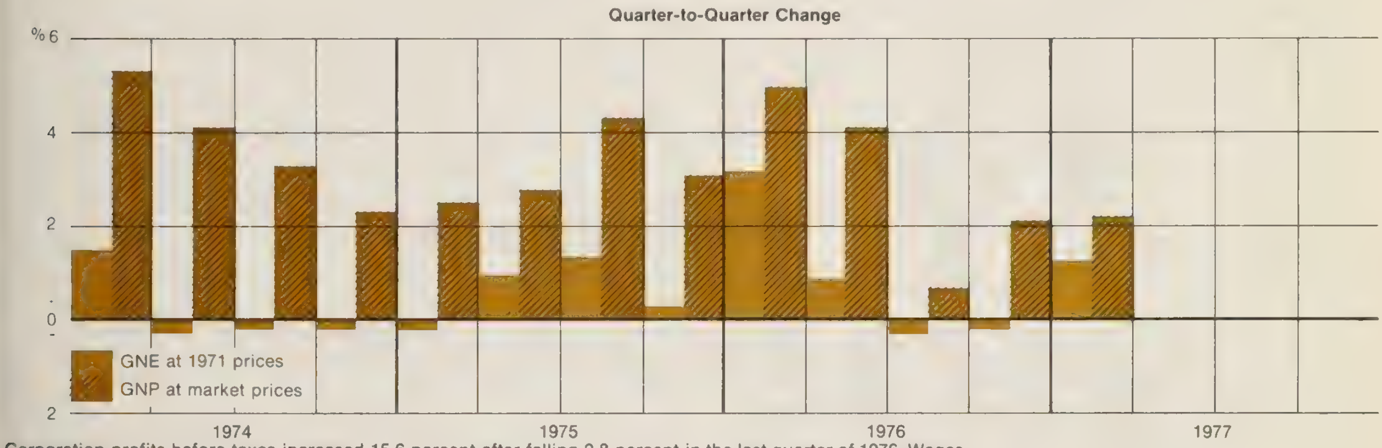
Wages, salaries, and supplementary labour income increased 1.0 per cent in the first quarter. This very low rate of growth is to some extent misleading

---

* Following normal practice, data from 1971 to 1976 have been revised. A discussion and analysis of the revisions will be provided in the first quarter publication, *National Income and Expenditure Accounts* (Catalogue 13-001) to be released in late July.

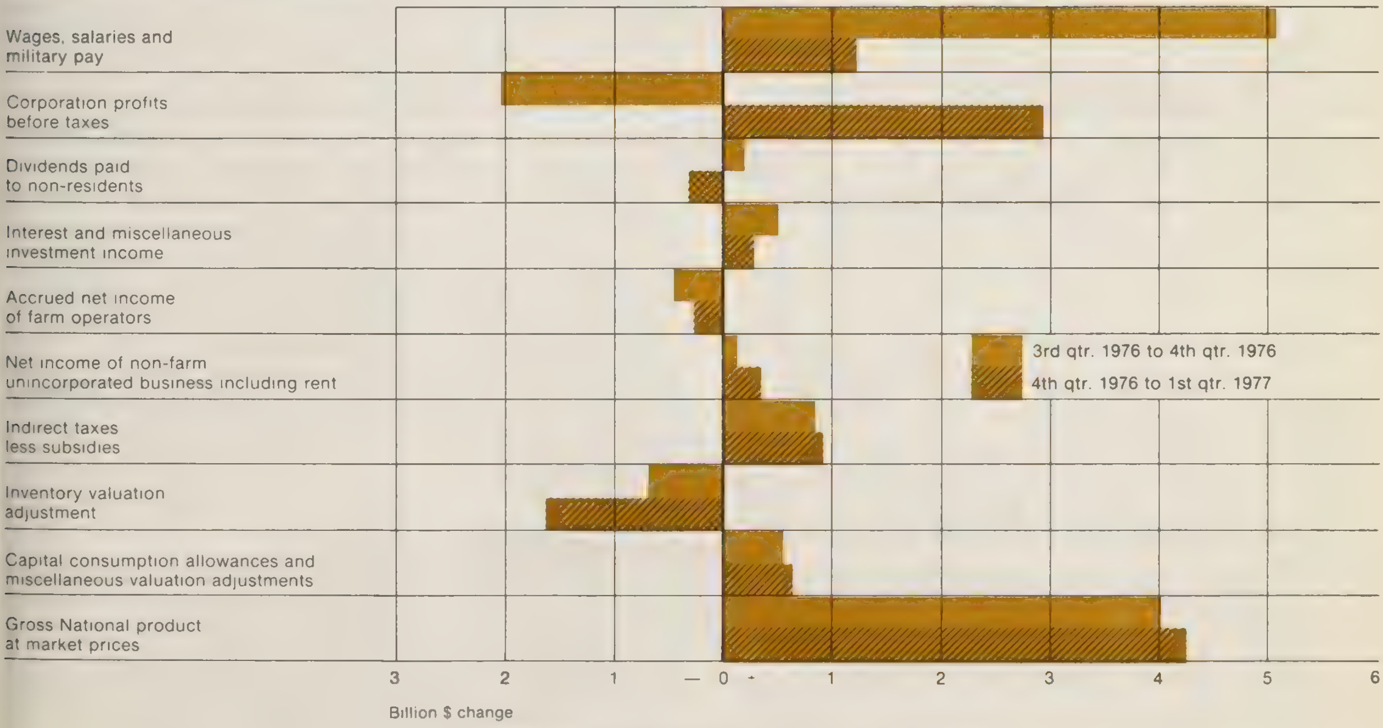
In the first quarter of 1977, Gross National Product, seasonally adjusted at annual rates, increased 2.2 percent to a level of $199.9 billion; in real terms GNP grew 1.3 percent.





Corporation profits before taxes increased 15.6 percent after falling 9.8 percent in the last quarter of 1976. Wages, salaries and supplementary labour income and interest and miscellaneous investment income had moderate increases of 1.1 percent and 2.6 percent after stronger fourth quarter growth of 4.6 and 4.8 percent respectively.

Quarterly changes in GNP and components



All quarterly data adjusted for seasonal variation and at annual rates because it has been distorted by the retroactive wage payments made by governments in the fourth quarter, but after these have been adjusted for, the first quarter rate of growth was 2.3 per cent. Of this, most was a result of an increase in average compensation rather than in employment.

Net income received by farm operators from farm production fell more than 20 per cent during the quarter, which left it at less than half its level of a year ago. There was also a decline of 2.1 per cent in interest, dividends, and miscellaneous investment income. These declines together with the weakness in labour income more than offset relatively large increases in non-farm unincorporated business income and in government transfers to persons, and personal income rose only 1.5 per cent during the quarter. This left it 9.6 per cent above the first quarter of 1976, the lowest year-over-year rate of growth in personal income since the first quarter of 1971.

Personal Expenditures

Because personal income tax collections increased by very nearly as much as personal income in the first quarter, personal disposable income rose only 0.5 per cent. Personal expenditure on goods and services increased 1.6 per cent in current dollar terms, with the result that personal saving as a percentage of personal disposable income fell to 8.5 per cent from 9.5 per cent last quarter.

In real terms, personal expenditure fell 0.4 per cent. Spending on durable goods was up 1.8 per cent, largely as a result of higher real expenditure on automobiles and recreational equipment, and expenditure on services increased 1.9 per cent. Spending on semi-durable goods fell 2.4 per cent, however, and there was a 3.7 per cent decline in expenditure on non-durable-goods, which reflected lower real spending on food.

Fixed Capital Formation

Gross fixed capital formation increased 0.5 per cent in real terms during the quarter, most of which resulted from a 3.5 per cent increase in business investment in non-residential construction. As the *Private and Public Investment in Canada* survey of 1977 intentions suggested, most of this growth was attributable to an increase in engineering expenditure. There was also a modest 0.5 per cent increase in business investment in machinery and equipment, but business investment in residential construction fell 2.0 per cent in real terms, making this the third consecutive quarter in which residential construction activity has declined.

Inventory Investment

After a moderate amount of stock building last quarter, the real value of the physical change in inventories fell by $1.0 billion in the first quarter. Much of this decline appears to have resulted from unexpectedly strong export demand.

The External Sector

Exports of goods and services increased 10.0 per cent in current dollar terms in the first quarter, putting them 17.4 per cent above the level of a year ago. There were substantial increases in exports of automobiles, trucks, aluminum, wheat, and iron ore, with United States demand accounting for most of the growth. Imports increased by a more moderate 7.2 per cent, and as a result, the deficit in trade of goods and services fell to $3.9 billion from $4.8 billion in the previous quarter. The service deficit continued to increase, however, largely as a result of further deterioration in the travel account.

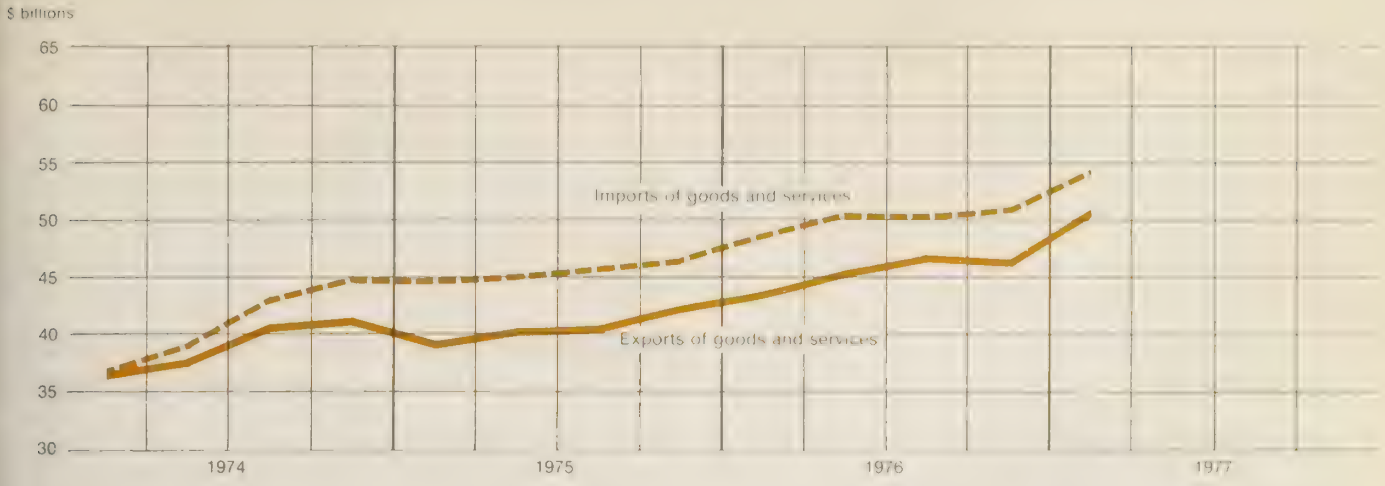
In constant dollar terms, exports increased 6.5 per cent while imports grew 0.7 per cent. The very large increase in the implicit deflator for imports reflects the depreciation of the Canadian dollar as well as sharp price increases in fresh fruits and vegetables, coffee, tea, and cocoa.

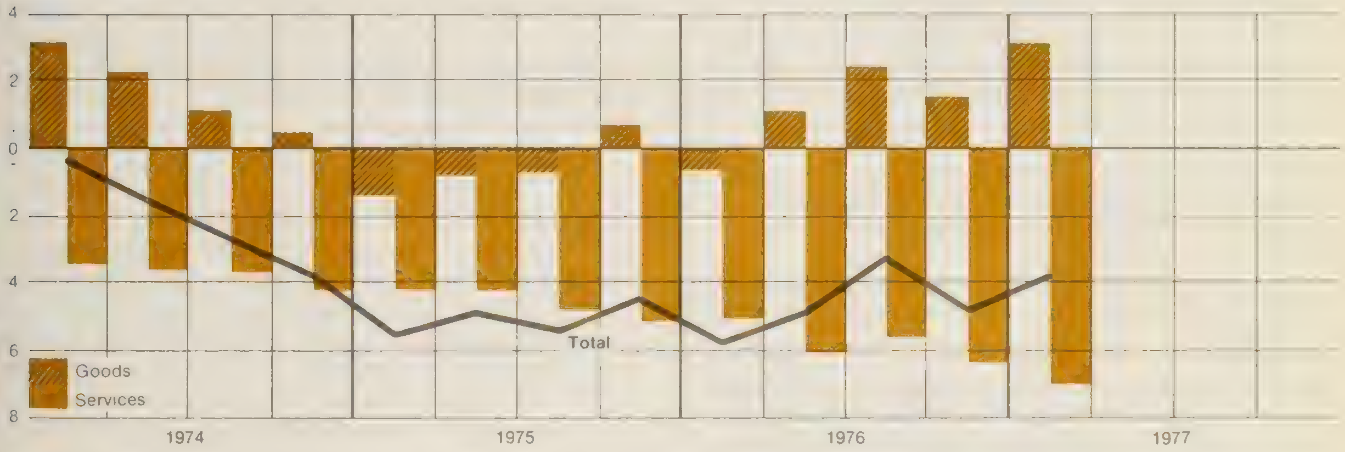
The increase in the real value of exports accounted for most of the first quarter growth, and because of its timing it may appear that the swing in the real growth rate can be linked to the decline in the international value of the dollar. It is not clear, however, that the increase in export value can be attributed completely or even primarily to the exchange rate movement. And the partially offsetting effects of the dollar's loss of value on the service account have yet to be seen in full, because a low level of dividend payments to non-residents in the first quarter masked the increase in debt servicing on foreign currency-denominated liabilities. There is also a danger that the exchange rate fall will in future reduce personal expenditure growth, because of the wealth-reducing impact of higher prices for personal expenditure commodities. This of course may act to hold down growth in imports, but it may also reduce expansion of expenditure on domestically produced commodities.

The Government Sector

Government current expenditure on goods and services increased 1.8 per cent in current dollar terms in the first quarter, while capital expenditure showed little change. Transfer payments to persons were up strongly, with higher provincial payments accounting for much of the 7.8 per cent growth, and there was also an increase in subsidy payments. The net result

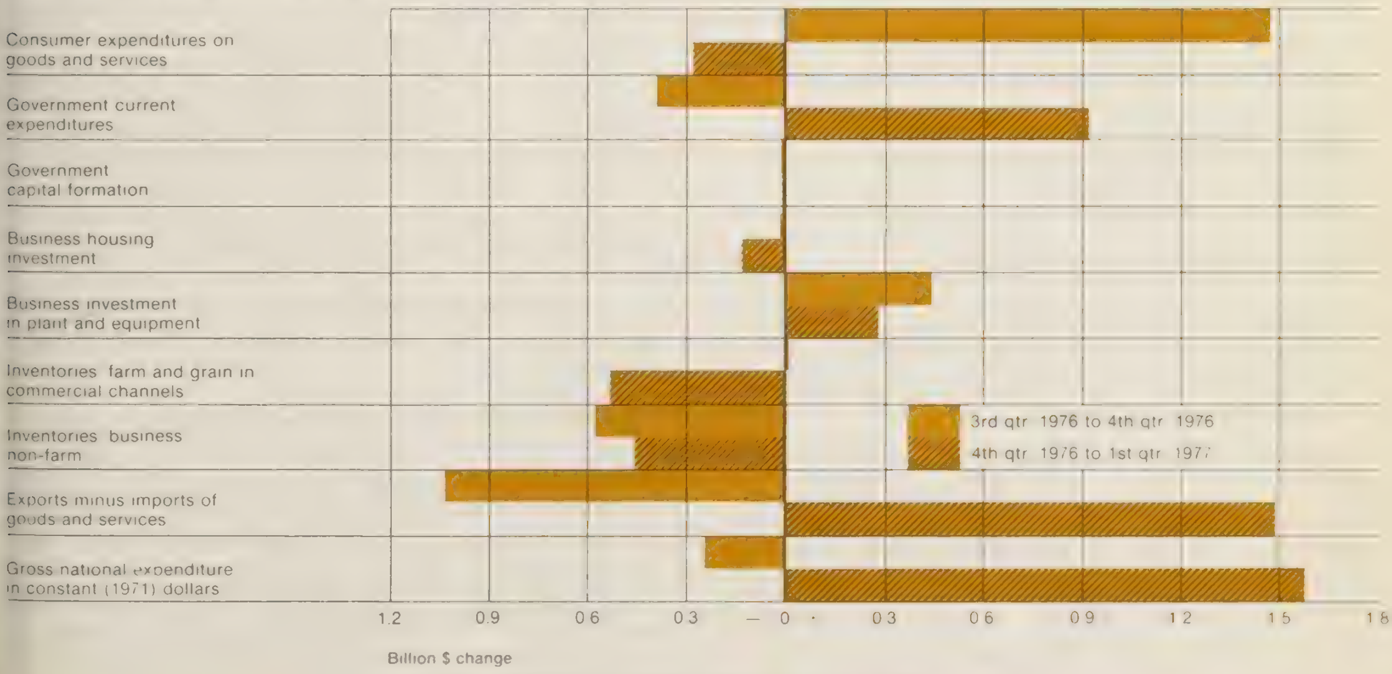
Exports increased 10 percent in current dollars with imports growing 7.2 percent for the same period. As a result the balance of trade in goods and services fell to $3.9 billion from $4.8 billion last quarter.





The first quarter strong growth in constant dollars was helped by a positive expenditure pattern in government, business investment in plant and equipment and an improved export market situation.

Quarterly changes in GNE and components in constant (1971) dollars



All quarterly data adjusted for seasonal variation and at annual rates

(continued on page 149)

Observations

Perspective Canada II

How many Canadians aged 65 and over live alone or in some form of non-family, collective housing?

How much more time do husbands with wives employed full-time outside the home devote to household maintenance chores than do husbands whose wives do not work full-time outside the home?

What percentage of persons convicted of indictable criminal code offences have been previously incarcerated in a Canadian penal institution?

What proportion of family income do families classified as low-income spend on essentials such as food and shelter?

Are physical activities, such as jogging and cross-country skiing becoming the predominant form of recreational activity in Canada, or is the majority of the leisure time of Canadians still claimed by the more sedentary pastimes, such as reading and watching television?

The answers to these and a multitude of other questions relating to the life styles, environments and quality of life of Canadians are presented in *Perspective Canada II*, Statistics Canada's recently published handbook on changing social conditions.

Perspective Canada II, however, is much more than a simple collection of interesting information items. Its authors have organized the data around Canadian social concerns and have focused not on the individual statistics or single historical trends, but on the multi-faceted nature of each concern. The result is a unique portrait of the Canadian people, their activities, and their environments.

This volume will be of immense interest to anyone concerned about Canadian society and its development, and should be of particular value to politicians, government planners, businessmen, trade unionists, social workers, high school and university students, teachers, and journalists.

Perspective Canada II highlights those topics critical to the quality of life in any society – health, education, housing, the environment, work and leisure, family structure, income and consumption, and crime and justice. It also portrays two specifically Canadian issues – the quality of life as experienced by Canada's native peoples, and the use or non-use of Canada's two official languages in a variety of institutions and life situations. In addition, *Perspective Canada II* features two theme chapters, one examining the character, life styles and opportunities of Canadians aged sixty-five and over, and the other providing a perspective on Canada's three major urban agglomerations – Montreal, Toronto and Vancouver. In this latter chapter, each metropolitan area has been divided into geographical sectors ranging from the central business district at the core of the city to the outer suburban fringes. A rather revealing intraurban view of the city life in Canada is the result.

Perspective Canada II is actually the second edition of what will be a continuing series dedicated to the development and refinement of social statistics and social indicators as they relate to the quality of life in Canada. The first edition of *Perspective Canada* was published in 1974, and readers of that issue will recognize certain similarities between the first and the current edition of *Perspective Canada*. In the new edition, approximately one fourth of the data presented constitute updates from the first edition. The remainder of *Perspective Canada II* contains new, often previously unpublished data providing either fresh insights into old problems or first looks at previously uncharted territory.

There are a number of other major changes in *Perspective Canada II*. Significant improvements have been made in the general appearance of the volume and timeliness of the material presented. In response to requests by readers of the first *Perspective Canada*, most chapters now include a number of tables giving international data, thus permitting some comparisons of life style and quality of life between Canada and other (primarily western) industrialized

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force

---

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

28 1.1 National Income and Gross National Product
28 1.2 Gross National Expenditure, Current Dollars
29 1.3 Gross National Expenditure, Constant Dollars
29 1.4 Sources of Personal Income
30 1.5 Disposition of Personal Income
30 1.6 Sources and Disposition of Gross Savings
31 1.7 Government Revenue, Expenditure, and Surplus of Deficit, by Level of Government
35 1.8 Implicit Price Indexes
35 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

36 2.1 Real Domestic Product by Industry of Origin, Quarterly
37 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

42 3.1 Canadian Balance of International Payments, Current Account, All Countries
42 3.2 Canadian Balance of International Payments, Current Account, Country Distribution
43 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1–Income and expenditure accounts

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] This item differs from column 6, table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers. [2] Includes all interest on the public debt paid by government to persons. [3] Charitable contributions and bad debts.

For source see Table 1.9.

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

		Deduct			Add			Deduct			Add	
Year and quarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U.I. benefit, prior to July 1975 included with regular benefit.

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are gîven in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

Table 12: Average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

Note Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste

A			612											

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly

Note Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties

Note: Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form.

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage Other important revisions were: Paper and board (44) now excludes woodpulp. Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. [1]This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2]Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available

Financial Activity in Canada in 1976

During 1976 the domestic non-financial sectors of the Canadian economy raised over $38.1 billion on financial markets, an increase of $5.7 billion over the volume of funds which was raised during the previous year (see Table 1, p. 146). At 17.6 per cent the rate of growth of total borrowing by the domestic non-financial sectors was more rapid than that of nominal GNP which grew by 14.5 per cent. Placed in perspective to the flow of final goods and services produced by the Canadian economy, the flow of credit raised by these sectors was 20.6 per cent of GNP. This ratio which is not unlike those of the past two years, is, nevertheless, relatively high by historical standards. Heavy credit demands contributed to the maintenance of interest rates in Canada which were high by international norms and a large volume of borrowing overflowed into foreign capital markets.

In broad terms financial activity in Canada was characterized by: an increase in the proportion of total funds raised going to the private non-financial corporate sector, reduced borrowing by the government sector, proper but heavy borrowing by the associated enterprises of governments, some downward movement in interest rates but the continued existence of large international interest rate differentials, increased emphasis on the foreign sector as a source of long-term funds for Canadian borrowers and a gradual reduction in the rate of growth of the narrowly defined money supply. There was increased emphasis on intermediated credit flows in 1976 compared to the preceding year. In 1975, approximately 72 per cent of the increase in conventional financial assets of the domestic non-financial sectors of the economy was represented by claims on financial institutions, in 1976 this percentage increased to over 91 per cent.

Following a recession that was milder than in many of the western industrialized countries, the Canadian economy entered a recovery phase in mid-1975. Gross National Product increased at rates of 14.5 per cent and 4.6 per cent in nominal and real terms respectively during 1976. While these rates of expansion were higher than in the previous year, there was a perceptible slowing in the expansion of economic activity as the year progressed. Much of the growth in 1976 was concentrated in the first quarter of the year when seasonally adjusted real GNP increased at an annual rate of 13.0 per cent; during the fourth quarter seasonally adjusted real GNP declined at an annual rate of 2.5 per cent. A spasmodic recovery was also characteristic of economic conditions in a number of Canada's trading partners including the United States. As a consequence, while the growth in Canada's exports was reasonably strong, the foreign sector did not provide as much stimulus to final demand in Canada as had been previously generally anticipated.

An increase in expenditures on fixed capital formation typically follows and reinforces other expenditures which initiate a revival in economic activity. In several industrialized countries, including Canada, investment expenditures appeared to be the heretic component of aggregate demand in 1976, failing to turn up decisively several quarters after what appears to have been the beginning of a recovery. Despite the impuissance of capital expenditures, the demands placed on capital markets by the private corporate sector were higher in 1976 than in 1975. Private non-financial corporations raised $8.3 billion in net new funds via conventional market channels, an amount which was 41 per cent higher than the 1975 flow. Several factors contributed to the rise in the amount of external (to the firm) funds raised by this sector over the past year, these include: a slow growth in internally generated funds in a number of industries, a large build-up in inventories early in the year, a continued need for balance sheet restructuring and building up of corporate liquidity and the removal of the with-holding tax on certain funds raised abroad. Over the past three years non-financial corporations in Canada have tended to rely

[1] A description of the Financial Market Summary Table was presented in "Measuring Financial Market Activity: A Macroeconomic Perspective", *Canadian Statistical Review*, March 1977

Table 2. Domestic Non-Financial Sectors Borrowing by Term

	1975					1976				
	I	II	III	IV	Annual	I	II	III	IV	Annual
					Millions of dollars					
Total shorter term[1]	1,983	2,745	2,157	5,943	12,828	4,567	3,038	2,445	4,885	14,935
Total longer term	3,468	5,069	5,069	5,923	19,529	5,469	5,786	5,571	6,295	23,121
Total borrowing by domestic non-financial sectors	5,451	7,814	7,226	11,866	32,357	10,036	8,824	8,016	11,180	38,056
Total borrowing by domestic non-financial sectors as a percentage of Gross Domestic Product	15.4	20.3	16.1	28.1	20.1	24.3	19.7	15.8	23.4	20.6

[1] Unmatured Canada Savings Bonds are included in the Total shorter term

more heavily on external finance than has been the case in the United States. The balance sheet positions of corporations in the United States would currently appear to be stronger than those of Canadian non-financial corporations in the sense that portfolio restructing appears to have been both more intensive and extensive in the United States.

The government sector reduced its demands for funds in both absolute and relative terms from the amount raised in 1975. Excluding funds raised through the social security system the government sector raised $8.0 billion in 1976 down from $8.9 billion in the previous year. Borrowing by the associated enterprises of government, however, increased from $4.0 billion in 1975 to $6.3 billion in the period under review. Much of this borrowing was done by provincial utilities in foreign capital markets.

Other major centres of borrowing activity were the mortgage market and the market for consumer credit. Spending on residential construction was one of the strongest components of final domestic demand in 1976. These expenditures increased dramatically at the outset of the year but increased at reduced rates as the year progressed. Mortgage credit outstanding increased by $9.7 billion or 13.5 per cent with traditional mortgage lenders being able to attract large inflows of funds. Mortgage rates remained high, with the rate on conventional mortgages averaging 11.78 per cent over the year. Consumer credit accounted for slightly over 10 per cent of total borrowing by the domestic non-financial sectors. At the close of 1976, consumer credit outstanding stood at $27.6 billion. The ratio of personal sector debt to personal disposable income has tended to drift upward in recent years, reflecting in large measure higher housing prices and the associated larger mortgages.

The trend towards longer-term forms of financing, which began in Canada late in 1974, was accentuated in 1975 and continued in 1976. Borrowing in long-term instruments as a percentage of total borrowing by the domestic non-financial sectors of the economy was 61 per cent in 1976 and approximately the same mix prevailed in 1975 (see Table 2)[1].

A number of changes in the form of financing for individual sectors are evident; these changes largely disappear in the aggregate however and for the economy as a whole there was very little change from the previous year in the mix of financial instruments used to raise funds. Borrowing by the non-financial private corporate sector was less heavily slanted towards longer-term forms of financing in 1976 than it was in 1975. The increase in shorter-term debt incurred by this sector, however, was in part associated with a heavy build-up of inventories in the first quarter and appears to have been but a temporary relapse in the general trend towards longer-term forms of borrowing.

Turning to the supply side of financial markets, 1976 witnessed a number of shifts in the roles played by suppliers of funds. The most noticeable shift was the large increase in the volume of long-term funds provided by the rest-of-the-world sector. The amount of funds supplied by the foreign sector in the form of conventional financial instruments increased by more than 93 per cent between 1975 and 1976 and a flow of $10.5 billion was recorded in the latter year (see Table 1). The proportion of total funds raised provided by the rest of the world increased from 7 per cent in 1974 to 15 per cent in 1975 and again to 25 per cent in 1976. Domestic private financial intermediaries assumed increased importance as conduits for credit flows during 1976 compared to the previous year. During 1976 approximately $27 billion representing over 63 per cent of total funds supplied was channelled through the domestic private financial intermediary system with the deposit accepting institutions accounting for the bulk of the increased flow. The volume of funds supplied by public sector financial institutions remained essentially unchanged from 1975 at $2.3 billion. The role of direct finance declined in 1976 relative to 1975 and financial asset accumulation by the private domestic non-financial sectors of the economy was highly concentrated in claims on financial institutions.

---

[1] Financial instruments are not homogeneous as to term and statements such as that above can be only taken as indicative of broad tendencies.

The height of interest rates in Canada compared to the situation which prevailed in the United States and Europe encouraged borrowers to raise capital outside the country. During the second half of 1975 a number of observers expected downward pressure on the Canadian dollar to emerge early in 1976. As it turned out the downward pressure on the spot value of the Canadian dollar originating in the current account of the balance of payments was more than offset by large capital flows. As a result there was upward pressure on the spot value of the Canadian dollar over much of the year. There was, however, an abrupt downward adjustment in the dollar in the fourth quarter.

The elevated short-term rates in Canada were in large measure a direct consequence of the efforts of the monetary authorities to reduce the rate of expansion of the money supply. While the general movement in short-term interest rates was downward over the year, the path downward was not monotonic. The decline in short-term rates that occurred at the outset of the year was reversed by Bank of Canada operations and short-term interest rates peaked in March. In the fall of the year when the rate of growth of the narrowly defined money supply was below the bank's target range, bank's policies were designed to accomodate a downward adjustment in interest rates. Over the year as a whole, short-term rates fell by about 100 basis points, the 90-day finance paper rate, for example, fell from 9.34 per cent in December of 1975 to 8.16 per cent by the close of 1976. Long-term interest rates also moved downward over the year, with the rate on long-term federal government securities falling by 102 basis points. The yield curve undulated during the year, but ended the year with approximately the same moderate upward slope that it had at the outset.

A more complete account of financial activity in Canada during the past year can be found in, *The Financial Flow Accounts, 4th quarter 1976* (catalogue 13-002). Instructions on how to construct the financial summary table (Table 1) from either published data in the Financial Flow Accounts or from CANSIM series are available free of charge, upon request. Inquiries should be directed to: Statistics Canada, Financial Flows and Multinational Enterprises Division, Financial Flows Section, 21st floor, R.H. Coats Bldg., Ottawa K1A 0T6.

National Income and Expenditure Accounts (continued from page 9)

of these movements was that total expenditure of all levels of government combined, excluding inter-government transfers, rose 3.2 per cent during the quarter.

Total revenue of all levels of government increased 6.4 per cent, of which about forty per cent was attributable to higher personal direct taxes. Corporate direct tax liabilities also rose sharply in the quarter. As a result, the deficit of all levels of government on a National Accounts basis fell to $1.3 billion from $3.5 billion last quarter.

(See tables page 150 to 152)

Table 1. National Income and Gross National Product, by Quarters, 1976 and 1977
Seasonally adjusted at annual rates

	1976					1977				
	I	II	III	IV	Year	I	II	III	IV	Year
					Millions of dollars

---

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication National Income and Expenditure Accounts, First Quarter 1977, Catalogue 13-001.

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are treated as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

Table 3. Gross National Expenditure in Constant (1971) Dollars, by Quarters, 1976 and 1977

Seasonally adjusted at annual rates[1]

	1976					1977				
	I	II	III	IV	Year	I	II	III	IV	Year

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

Observations (continued from page 10)

societies. Finally, an index has been added to facilitate the locating of related tables in different chapters.

Readers should direct their comments, questions and criticisms to H.J. Adler, Senior Adviser on Integration, Statistics Canada, 25th Floor, R.H. Coats Building, Tunney's Pasture, Ottawa K1A 0T6; (613-992-4571).

Limited numbers of the first edition of *Perspective Canada* (catalogue number 11-507, price $6.75 in Canada, $8.10 elsewhere) are also available.

Key Economic Series

As an added service to those readers concerned with monitoring economic conditions, a listing of those series which are expected to become available during each week of the next calendar month will appear in the *Statistics Canada Daily* on the third working day prior to the end of each month and will include the relevent series selected from the following list:

	Frequency
Gross National Product	Quarterly
Financial Flows	Quarterly
Index of Industrial Production	Monthly
Real Domestic Product	Monthly
Labour Income	Monthly
Unemployment Insurance	Monthly
Employment Earnings and Hours	Monthly
Wholesale Price Index	Monthly
Industrial Selling Price Index	Monthly
Industrial Corporations – Preliminary Financial Statistics	Quarterly
Retail Trade	Monthly
Consumer Credit	Monthly
Wholesale Trade	Monthly
Inventories, Shipments and Orders	Monthly
Building Permits	Monthly

This list may be amended from time to time in response to demonstrated interest for other series.

It will be evident the above list does not include those series which already have firm release dates, i.e. Labour Force Survey, Consumer Price Indexes and Preliminary Statement of Canadian Trade, however the dates for these series will be included in each end-of-month announcement.

The targets for release will be based on the best information available at that time and in most cases release will be during the week scheduled. However, favourable factors may produce results a few days ahead of schedule or, where we experience unavoidable compilation difficulties, it is possible a report could be released during the following week.

For further information, contact Mr. Jack Kerr (613-992-1548), Production Planning and Scheduling Division, Statistics Canada, Ottawa K1A 0T6.

Construction Industry – Preliminary Data

Preliminary 1975 data were recently compiled and are now available for a selected sample of large construction industry general and special trade contractors. The sample, stratified to include all contractor establishments having annual gross revenues of greater than $500,000, is based on the recently implemented Revised 1970 Standard Industrial Classification, which provides a much more extensive group delineation than was available in previous years.

The various sub-industry groups, along with an abbreviated selection of operating information (profit and loss statement) for each, are presented on p. 154. The table provides a near universe measure of large contractor establishments as previously defined (i.e. data included for some 93.5 per cent firms comprising the 1975 estimated universe). Additional detail compiled from the same sample – and now available on request from the Construction Division – include financial information covering additional items of the profit and loss and balance sheet statements; labour data, such as manhours worked, degree of unionization and number of salaried employees; broad commodity output statistics, such as by type of construction and by new and repair; and other groupings of aggregates including by province, by size, etc.

Similar data for contractor establishments having annual gross revenues of less than $500,000 – which covers the large majority of all construction contractors – is still in the process of being assembled and compiled. It is currently anticipated that complete and integrated census-level data for the total construction industry will be available by the fall of 1977. Such universe measures will be the first of their type to be produced.

For further information, contact V. Totten (613-994-9756), Construction Division, Statistics Canada, Ottawa K1A 0T6.

(See table p. 154-155)

General Contractors, Trade and Sub-contractors, Canada 1975 (S.I.C. 404-421)

Industry groups[1]	Total numbers of establish-ments	Total operating revenue	Operating costs						Net operating profit (loss) before taxes
			Payments to sub-contractors	Materials	Wages	Salaries	Depre-ciation	Other costs	
			thousands of dollars
